

HIGHER NITEC IN DATA ENGINEERING (2 YEARS)

CERTIFICATION

Credits required for certification:

Core Modules	: 27
Specialisation Modules	: 20
Life Skills Modules	: 9
Cross Disciplinary Core Modules	: 6
Electives	: 4
Total	: 66

COURSE STRUCTURE

Module Title	Credits
CORE MODULES	
Fundamentals of Data	3
Web Development Essentials	3
Software Development Practices	3
Programming Essentials	3
Database Concepts	3
Data Science Programming	3
Data Processing	3
Data Extraction & Analytics	3
Data Cleansing	3
SPECIALISATION MODULES	
Data Storytelling	3
Data Preparation for Machine Learning	3
Dynamic Dashboard Development	3
Predictive Data Modelling	3
Industry Attachment	8
LIFE SKILLS MODULES

Note: The offer of electives is subject to the training schedule of respective ITE Colleges. Students are advised to check with their Class Advisors on the availability of the elective modules they intend to pursue.

MODULE OBJECTIVES

Core Modules

Fundamentals of Data

On completion of the module, students should be able to import data from external sources, perform basic data manipulation and present simple visualisation of the data.

Web Development Essentials

On completion of the module, students should be able to develop web pages using HTML and CSS.

Software Development Practices

On completion of the module, students should be able to apply their knowledge and skills in software development methods on recommended solutions.

Programming Essentials

On completion of the module, students should be able to apply fundamental programming concepts and computational thinking for basic programs.

Database Concepts

On completion of the module, students should be able to create database objects and edit data in tables. Students will be able to query data that utilise relational database concepts.

Data Science Programming

On completion of the module, students should be able to apply techniques to explore, collect, analyse, transform, and leverage data. These involve preparation by processing varying amounts of data from different sources based on business requirements.

Data Processing

On completion of the module, students should be able to manipulate data into usable and desired form that is suitable for analytics processing. Students will also be able to process using a predefined sequence of operation either manually or automatically.

Data Extraction & Analytics

On completion of the module, students should be able to apply data extraction of data sets from various data sources, including data explorations and analytics.

Data Cleansing

On completion of the module, students should be able to clean data, including load data sets into correct data structures, detect/remove/replace unwanted data, format data correctly, check data accuracy, and deal with inconsistencies in the data sets.

Specialisation Modules

Data Storytelling

On completion of the module, students should be able to design data reports, deploy storyboards and present their insights through data storytelling

Data Preparation for Machine Learning

On completion of the module, students should be able to apply techniques to explore, collect, analyse, transform, and leverage data. This involves preparation by processing varying amount of data from different sources based on business requirements.

Dynamic Dashboard Development

On completion of the module, students should be able to implement contemporary techniques, dynamic dashboard to present patterns and trends from data in a strategic manner for targeted audience.

Predictive Data Modelling

On completion of the module, students should be able to generate data insights through machine learning algorithms, computational and statistical data modelling and data visualisation.

Industry Attachment

On completion of the module, students should be able to apply and integrate the skills and knowledge that they have acquired at ITE College and develop competencies in other areas not covered in the curriculum, at the workplace.

Life Skills Modules
