

HIGHER NITEC IN AUTOMOTIVE ENGINEERING

COURSE SYNOPSIS

On completion of the course, students should be able to

- Perform engine systems diagnostics.
- Perform electrical systems diagnostics.
- Perform chassis diagnostics.
- Perform driveline diagnostics.

JOB OPPORTUNITIES

Higher Nitec in Automotive Engineering graduates are employed by fleet maintenance workshops, service garages, franchised motor dealers, vehicle inspection centres and government agencies. Common job titles may include Senior Technician, Team Leader and Senior Vehicle Inspector. There are excellent opportunities for career advancement to supervisory positions and beyond.

CERTIFICATION

Credits required for certification:

Core Modules	:	49
Life Skills Modules	:	9
Elective Modules	:	4
Total	:	62

COURSE STRUCTURE

Module Title	Credits
CORE MODULE	
Automotive Mechanics	6
Control and Transmission Technology	7
Engine Technology	7
Automotive Electrics	7
Engine and Electrical Systems Diagnostics	7
Control and Transmission Diagnostics	7
Industry Attachment	8
ELECTIVES (GENERAL)	
Refer to pages 277-278	
LIFE SKILLS MODULES	
Refer to page 281	

Note: The offer of electives is subject to the training schedule of respective ITE Colleges. Students are advised to check with their Class Advisors on the availability of the elective modules they intend to pursue.

MODULE OBJECTIVES**Core Modules****Automotive Mechanics**

On completion of the module, students should be able to observe workplace health and safety, extract technical information, select and use lifting equipment and hand tools [to disassemble and reassemble automotive systems and components, perform basic maintenance of chassis and undercarriage as well as transmission system and components, and handle proper disposal of automotive wastes.

Control and Transmission Technology

On completion of the module, students should be able to carry out servicing and perform inspection of the brake system, chassis and undercarriage, transmission system and supplemental restraint systems on a vehicle.

Engine Technology

On completion of the module, students should be able to perform inspection of the air intake system, fuel system, engine management system, emission control system, and engine mechanical system on a vehicle.

Automotive Electrics

On completion of the module, students should be able to interpret diagnostics results and rectify faults in vehicle electrical systems, electronic circuits and air-conditioning system.

Engine and Electrical Systems Diagnostics

On completion of the module, students should be able to conduct system fault finding with the use of diagnostic tools and equipment, and rectify faults in engine electrical, body electrical, air-conditioning, fuel, lubrication and cooling, engine mechanical, engine management and emission control systems, as well as service alternative powered vehicle's motor and battery.

Control and Transmission Diagnostics

On completion of the module, students should be able to interpret diagnostics results and rectify faults on vehicle wheel alignment, drive-line, suspension and steering, braking and transmission systems on petrol or diesel powered vehicles as well as service alternative powered vehicle's powertrain.

Industry Attachment

Students will undergo a six-month internship in an automotive company to deepen their skills and knowledge acquired in ITE, and develop competencies in other specialized areas that may be unique to their attachment companies.

Electives (General)

As reflected on pages 277-278.

Life Skills Modules

As reflected on page 281.

HIGHER NITEC IN CIVIL & STRUCTURAL ENGINEERING DESIGN

COURSE SYNOPSIS

On completion of the course, students should be able to

- Prepare civil and structural layout plans.
- Prepare civil and structural components' schedule and details such as beams, slabs, columns, foundation, roads, drainage and sewerage.
- Prepare civil and structural detailed drawings.
- Prepare shop drawings for construction.
- Liaise with engineers to resolve discrepancies and site problems.

JOB OPPORTUNITIES

Higher Nitec in Civil & Structural Engineering Design graduates are employed by government departments, statutory boards and civil structural consultancy companies in the building and construction sector. They perform a crucial role of ensuring the structural drawings, civil engineering drawings and detailed drawings on structural building are produced to meet the needs of the users such as clients, contractors, authorities, consultants and building occupants, at the different stages of the project. Some of the job titles held by graduates include Civil & Structural Draftsman, Technical Executive, Technical Officer and CAD Designer.

CERTIFICATION

LIFE SKILLS MODULES	
Refer to page 281	

Note: The offer of electives is subject to the training schedule of respective ITE Colleges. Students are advised to check with their Class Advisors on the availability of the elective modules they intend to pursue.

MODULE OBJECTIVES

Core Modules

Engineering Graphics

On completion of the module, students should be able to produce technical sketches, engineering detailed drawings, 3D solid modelling, assembly drawings in accordance with ISO standards.

Engineering Mathematics and Statics

On completion of the module, students should be able to apply knowledge of mathematics to solve engineering problems involving the use of algebra, indices, logarithms, trigonometry and basic statistics. Students would also be equipped with the fundamental knowledge of statics and be able to solve engineering problems involving equilibrium of bodies subjected to forces.

Building Information Modelling

On completion of the module, students should be able to create 3D models, extract information, perform taking-off from BIM model and produce BIM components.

Building Structures and External Works

On completion of the module, students should be able to produce foundation layout plans and schedules of footing and staircase, reinforced concrete drawings of floor, staircase and, structural components such as foundations, retaining walls and detailed drawings of external works such as drains, sewers, culverts, carriageway, drainage and sewerage systems.

Reinforced Concrete Detailing and Design

On completion of the module, students should be able to create 3D models using BIM, to draw structural drawings for piling, pile caps, reinforced concrete core walls, prepare column schedules and detailed drawings of reinforced concrete beams and slabs, precast concrete components and precast beam and slab drawings.

Steel Structure Detailing and Design

On completion of the module, students should be able to create 3D steel structure models using BIM software and to produce steel structure working drawings with detailed connections of steel members.

Industry Attachment

Students will undertake a 6-month industry attachment at the civil structural consultancy companies in the building and construction sector to complement and reinforce the skills and knowledge acquired at ITE and to develop competencies in other specialized areas.

Electives (Course Specific)

Elementary Quantities

On completion of the module, students should be able to calculate and prepare the bill of quantities for simple building work in accordance with Civil Engineering Standard Method of Measurement Code.

Model Making

On completion of the module, students should be able to construct a scaled model of a structural frame.

Land Surveying

On completion of the module, students should be able to perform simple levelling work, set out horizontal angles and calculate reduced levels from field bookings.

Electives (General)

As reflected on pages 277-278.

Life Skills Modules

As reflected on page 281.

HIGHER NITEC IN ELECTRICAL ENGINEERING

COURSE SYNOPSIS

On completion of the course, students should be able to

- Ensure all electrical and related works are carried out in compliance with electrical and BIM drawings, specifications, relevant workplace safety and health regulations and codes of practice
- Manage maintenance of electrical motor installation and control systems
- Manage maintenance of electrical installations, electrical equipment and fibre-optic control network, intelligent control, smart monitored emergency lighting, fire and lightning protection systems in buildings
- Manage operation and maintenance of smart home, intelligent building control and remote monitoring and data analytics systems
- Manage operation and maintenance of advanced field bus instrumentation and solar PV systems

JOB OPPORTUNITIES

Higher Nitec in Electrical Engineering graduates are employed by government departments, statutory boards and private companies. They perform a crucial role of ensuring that electrical installations, equipment and systems are operational. Some of the job titles held by *Higher Nitec* in Electrical Engineering graduates include Electrical Maintenance Technical Officer or Supervisor, Electrical Engineering Technician, Electrical Power Technician, Engineering Assistant, Instrumentation Technician, Electrical & Electronics Marketing Executive and Production Supervisor. There are excellent opportunities for career advancement to supervisory positions and beyond.

MODULE OBJECTIVES

Core Modules

Electrical Design and Installation

On completion of the module, students should be able to design, prepare electrical drawings of and maintain electrical installations in residential, industrial and commercial premises in compliance with relevant local standards, regulations and codes of practice.

Electrical Power and Distribution

On completion of the module, students should be able to maintain electrical power and distribution system including switchboards and electrical back up supply system, perform lockout and tag out procedures and remote energy monitoring system in compliance with relevant local standards, regulations and codes of practice.

Motor Control and Drives

On completion of the module, students should be able to maintain electrical motor installations including advanced motor drives and control systems and also implement predictive and condition based maintenance in compliance with relevant local standards, regulations and codes of practice.

Predictive Maintenance and Servicing

On completion of the module, students should be able to maintain various electrical and industrial equipment and appliances, fire alarm system through the application of condition monitoring and data analysis in compliance with relevant local standards, regulations and codes of practice.

Intelligent Building Systems

On completion of the module, students should be able to program and implement smart, internet-linked control and automation solutions for residential and commercial buildings as well as maintain associated digital communication network and cabling system in compliance with relevant local standards, regulations and codes of practice.

Solar Photovoltaic Systems

On completion of the module, students should be able to maintain renewable solar energy systems and implement smart, internet-linked instrumentation and monitoring systems in compliance with relevant local standards, regulations and codes of practice.

Instrumentation and Control Systems

On completion of the module, students should be able to maintain instrumentation and control systems and associated remote, smart internet-linked monitoring systems (Industry 4.0 and IoT) in compliance with relevant local standards, regulations and codes of practice.

Industry Attachment

Students will be attached to relevant companies to complement and reinforce the skills and knowledge acquired at ITE and to gain professional and working experience.

Electives (Course Specific)

Sensor Technology

On completion of the module, students should be able to explain the principles of operation, characteristics and applications of various sensors in industrial and electrical engineering works.

SCADA

On completion of the module, students should be able to explain the basic configuration and provide an overview of a SCADA system. They are also trained to explain the techniques and methods used on data acquisition, the control of the field devices, communication, applications and operation of the system.

Structured Cabling

On completion of the module, students should be able to explain the principles of structured cabling and install a standard cabling system accordingly to the relevant standard. They also should be able to perform testing and trouble-shooting and certify the quality of structured cabling installations with both copper and fibre-optic cables.

Applied Pneumatic Control

On completion of the module, students should be able to develop control circuits based on knowledge of the construction, principles of operation and application of the various components and equipment in electromechanical, pneumatic and electro-pneumatic control systems.

Power Quality

On completion of the module, students should be able to use monitoring tools to measure power quality (PQ) in an electrical power installation. They should also be able to explain the various sources of power quality problems and their mitigation techniques.

Lighting Effects and Applications

On completion of the module, students should be able to apply the principles of lighting effects to install and maintain lighting schemes for different client requirements.

Electives (Joint ITE-Industry)

PLC Control Builder

On completion of the module, students should be able to use PLC engineering tool to configure projects based on IEC61131-3 standard with one or several applications running in PLC.

Electives (General)

As reflected on pages 277-278.

Life Skills Modules

As reflected on page 281.

HIGHER NITEC IN ENGINEERING WITH BUSINESS

COURSE SYNOPSIS

On completion of the course, students should be able to

- Troubleshoot problems in manufacturing processes.
- Design jigs and fixtures for manufacturing.
- Initiate continuous work improvement activities to manufacturing processes.
- Perform production scheduling and material requirement planning for manufacturing processes.
- Maintain quality assurance system for manufacturing.
- Prepare necessary documents for manufacturing and assembly.
- Perform technical marketing, sales and services.

JOB OPPORTUNITIES

Higher Nitec in Engineering with Business graduates are employed by high value manufacturing industries in consumer electronics, precision engineering and equipment/ products/ components manufacturing companies. Some of the job titles held by graduates include Engineering Assistant, Manufacturing Engineering Technician, Production Supervisor and Quality Assurance Technician. They are also suitable to be employed as Sales Executives and Assistant Sales Engineers. There are excellent opportunities for career advancement to supervisory positions and beyond.

Note: The offer of electives is subject to the training schedule of respective ITE Colleges. Students are advised to check with their Class Advisors on the availability of the elective modules they intend to pursue.

MODULE OBJECTIVES

Core Modules

Mathematics and Engineering Systems

On completion of the module, students should be able to solve engineering problems involving algebra, indices, graphs, trigonometry and statistics, and to perform electrical installation as well as connect pneumatic and hydraulic systems.

CAD and Engineering Design

On completion of the module, students should be able to create 2D drawings of engineering components using a CAD system as well as produce 3D solid models and also to design a mechanical system comprising various machine elements.

Quality Engineering

On completion of the module, students should be able to interpret the Workshop Safety and Health (WSH) regulations, the requirements of ISO 9001 and 14001 under Quality Management System, Lean Six Sigma, and apply fundamental quality tools and techniques for problem solving and quality inspection, and also the use of precision measuring tools with statistical process control capabilities.

Engineering Materials and Mechanics

On completion of the module, students should be able to classify engineering materials, conduct destructive and non-destructive testing and also able to apply the laws and principles of statics and dynamics to design engineering systems.

Elements of Business Practice

On completion of the module, students should be able to perform effective business communications, comply with business ethics and practices, and conduct technical sales.

Manufacturing Processes and Prototyping

On completion of the module, students should be able to perform rapid prototyping, verify and troubleshoot machine parameters and perform part programming using CAD/CAM software, and also carry out study of equipment layout and process flow in a manufacturing environment.

Manufacturing Engineering

On completion of the module, students should be able to conduct work study, perform process planning, carry out productivity improvement activities, perform manufacturing resources planning and conduct risk assessment for the workplace.

Fundamentals of Marketing

On completion of the module, students should be able to carry out technical marketing, logistics administration, sales and services in the business set up.

Industry Attachment

On completion of the module, students should be able to acquire and apply a cluster of key technical, social and methodological competencies in their occupation.

Electives (Course Specific)

Conventional Machining

On completion of the module, students should be able to perform machining operations on conventional lathe and milling machines.

Jig and Fixture Design

On completion of the module, students should be able to design and draw a drill jig, turning and milling fixture using CAD software.

Product Prototyping

On completion of the module, students should be able to create simple design of a product using 3-D CAD software and produce a 3-D model of it using basic prototyping devices.

Electives (General)

As reflected on pages 277-278.

Life Skills Modules

As reflected on page 281.

HIGHER NITEC IN FACILITY MANAGEMENT

COURSE SYNOPSIS

On completion of the course, students should be able to

- Supervise and coordinate building maintenance work such as air-conditioning, electrical, mechanical, fire protection, building, plumbing and sanitary systems, and general services.
- Supervise fire-safety related tasks assigned by Fire Safety Manager to ensure safe and efficient operations of buildings and facilities.
- Assign and manage subordinates in the execution of FM (facility management) activities.
- Perform maintenance duties as and when needed.

JOB OPPORTUNITIES

Higher Nitec in Facility Management graduates could be employed directly by large establishments who manage their own facility or indirectly via facility management companies. They will be able to take on jobs as Facility Technical Officer, Facility Supervisor and Facility Executive. They could also take on the role of workplace safety & health supervisor and/or fire safety manager if they passed Workplace Safety & Health Management module under the direct recognition scheme by the Ministry of Manpower and/or Fire Safety Management elective module accredited by Singapore Civil Defence Force.

Nitec in Facility Technology (Landscaping Services) or Nitec in Facility Technology (Vertical Transportation) graduates with minimum GPA of 3.0 and had completed "Air-Conditioning and Building Management System" and "Building Fire-Fighting and Protection Systems" elective modules can apply to progress directly to second year of study in Higher Nitec in Facility Management course.

MODULE OBJECTIVES

Core Modules

Mechanical Systems and Services

On completion of the module, students should be able to interpret building mechanical system plan, perform inspection of automated doors and pump system, conduct operational test of standby generator, as well as maintain the fire-protection and fire-fighting systems.

Electrical Systems and Services

On completion of the module, students should be able to interpret electrical circuit diagrams, conduct continuity and insulation resistance tests, and coordinate setting up of AV system. They should be able to inspect the lightning protection and earthing system, conduct first line maintenance of uninterruptable power supply, and coordinate maintenance of Extra Low Voltage system as well as the power and lighting circuits.

Air-Conditioning Systems

On completion of the module, students should be able to maintain air-conditioning system and supervise components replacement, maintain chilled water centralized system as well as cold room refrigeration system.

Building Management System

On completion of the module, students should be able to interpret the various types of control systems linked to Building Management System (BMS), conduct system wellness check for main and sub-systems, manage common causes of faults, generate and compile system reports linked to BMS, and also supervise manned security services.

Workplace Safety and Health Management

On completion of the module, students should be able to apply the Workplace Safety and Health (WSH) knowledge and skills to assist in the identification of hazards and implementation of risk control measures, conduct inspection, comply and communicate WSH legal requirements, perform incident reporting, implement WSH management process, perform effective communication and report on the outcome of WSH inspection.

Building Services Systems Analysis and Management

On completion of the module, students should be able to interpret architectural drawings, maintain fittings and fixtures, plumbing sanitary systems, as well as the masonry works of the building. Students should be able to supervise swimming pool maintenance, landscaping services, pest control and cleaning activities, monitor lift and escalator maintenance, as well as carry out inspection of painting works and manage electronic car park system.

Project Management and Supervision

On completion of the module, students should be able to plan for resource deployment and work schedule, monitor project activities to ensure compliance and in accordance with safety, security and statutory requirements, and communicate with stakeholders to ensure co-operation and smooth completion of project.

Industry Attachment

Students will be attached to relevant companies to complement and reinforce the skills and knowledge acquired at ITE and to gain professional and working experience.

Electives (Course Specific)

Water Efficiency in Building

On completion of the module, students should be able to conduct water audit and apply water efficiency measures to reduce water consumption in commercial/residential buildings.

Energy Audit and Management

On completion of the module, students should be able to conduct on-site energy audit using appropriate measuring instruments and tools, and recommend corrective measures for energy savings.

Green Building Technology

On completion of the module, students should be able to assist engineers to carry out design, fabrication, modification and commissioning of Green facilities and assist engineers in the operation, management and services related to Green facilities.

Electives (Joint ITE-Industry)

Fire Safety Management

On completion of the module, students should be familiar with the basic working knowledge on fire science and fire safety engineering, the various types of fire protection installations, operation and maintenance, and the means to respond to fire alarm activation, fight incipient fire, and performing rescue and evacuation exercises. In addition, they should be equipped with the basic knowledge of first aid, the basic requirement of fire safety installations and maintenance including building inspection and testing of fire protection system, and the requirements of roles and responsibilities of Fire Safety Managers.

Electives (General)

As reflected on pages 277-278.

Life Skills Modules

As reflected on page 281.

HIGHER NITEC IN FACILITY SYSTEMS DESIGN

COURSE SYNOPSIS

On completion of the course, students should be able to prepare working drawings and assist in the design of the following building facility systems with application software:

- Air-conditioning and ventilation systems
- Electrical installation and control systems
- Fire protection and fighting systems
- Water supply and sanitary systems

JOB OPPORTUNITIES

Higher Nitec in Facility Systems Design graduates are employed by companies in the building industry. These include companies providing engineering consultancy services involved in building services such as electrical installations, air-conditioning ducting, fire protection, water supply and sanitary plumbing. Some of the job titles held by graduates include Facility Systems CADD Specialist, Facility Systems Assistant Designer and Mechanical & Electrical Draughtsman. There are excellent opportunities for career advancement to supervisory positions and beyond.

MODULE OBJECTIVES

Core Modules

Engineering Graphics

On completion of the module, students should be able to produce technical sketches, engineering detailed drawings, 3D solid modelling, assembly drawings in accordance with ISO standards.

Engineering Mathematics and Statics

On completion of the module, students should be able to apply knowledge of mathematics to solve engineering problems involving the use of algebra, indices, logarithms, trigonometry and statistics. Students would also be equipped with the fundamental knowledge of statics, and be able to solve engineering problems involving equilibrium of bodies subjected to forces.

Building Information Modelling

On completion of the module, students should be able to create 3D models, extract information, perform taking-off from BIM model and produce BIM components.

Electrical System Design

On completion of the module, students should be able to perform design on electrical system for buildings, and prepare the drawings in accordance to the standard codes of practice and government regulations.

Air Conditioning and Ventilation System Design

On completion of the module, students should be able to estimate the cooling load of a building, create 3D models and perform design on air-conditioning ducting, and prepare working drawings for ducting layouts and related pipework using catalogues and in accordance to the standard codes of practice and government regulations.

Plumbing and Fire Protection System Design

On completion of the module, students should be able to produce piping layouts and prepare drawings on plumbing system, sanitary system and sprinkler system in accordance to the standard codes of practice and government regulations.

Industry Attachment

Students will be attached to M&E consultant companies to complement and reinforce the skills and knowledge acquired at ITE and to develop competencies in other specialized areas.

Electives (Course Specific)

Green Building Technology

On completion of the module, students would be equipped with the fundamental skills and knowledge of green building technologies and design, and incorporate environment-friendly features in building facility design.

Electives (Inter-disciplinary)

Engineering Project Management

On completion of the module, students should be able to apply the tools and techniques that enable the project team to organize and manage their project work to meet requirements and challenges.

Land Surveying

On completion of the module, students should be able to perform simple levelling work, set out horizontal angles and calculate reduced levels from field bookings.

Electives (General)

As reflected on pages 277-278.

Life Skills Modules

As reflected on page 281.

HIGHER NITEC IN LANDSCAPE MANAGEMENT & DESIGN

COURSE SYNOPSIS

On completion of the course, students should be able to

- Organise, coordinate and oversee various aspects of landscaping maintenance and construction works.
- Supervise and coordinate deployment of workforce.
- Supervise the selection and procurement of plants and planting materials for landscaping construction and maintenance works.
- Perform scheduling and implement maintenance plans for common turf and park areas.
- Oversee the maintenance plan for equipment and machinery.
- Supervise the undertaking of plant health care programs.
- Supervise the propagation of plants, undertake nursery operations, and maintain nursery plants and facilities.
- Assist in the supervision of installation and maintenance for skyrise greenery and other green infrastructure.
- Assist in the supervision of arboriculture operations and maintain tree health and safety.
- Interpret, prepare and present landscape design drawings.

JOB OPPORTUNITIES

Higher Nitec in Landscape Management & Design graduates could be employed as Landscape Supervisor in the landscaping construction and maintenance companies. Graduates could also work as Assistant Horticulturists, Assistant Arborists and Landscape Coordinators in the related landscaping sectors. In addition, they could be employed by building maintenance companies to oversee the installation and maintenance of skyrise greenery, arboriculture operations and nursery operations.

Note: The offer of electives is subject to the training schedule of respective ITE Colleges. Students are advised to check with their Class Advisors on the availability of the elective modules they intend to pursue.

MODULE OBJECTIVES

Core Modules

Nursery Production

On completion of the module, students should be able to perform management and maintenance works in a plant production nursery. They should also be able to perform tasks such as re-potting, propagation, harvesting, and maintenance of nursery facilities and customer service. In addition, students should be able to perform identification of plant pests and diseases.

Arboriculture Operations

On completion of the module, students should be able to perform basic tree structural safety inspection and tree health inspection. They should be able to assist in the supervision of tree maintenance works including planting, transplanting, pruning, removal, selection, establishment and the implementation of maintenance plan for arboriculture equipment and tools.

Sports Turf Operations

On completion of the module, students should be able to supervise the installation, maintenance and first line troubleshooting of drainage and irrigation systems in turf areas on golf courses and sports turf. They should also be able to perform integrated pest management program including pests, diseases, disorders and soil analysis. In addition, they should be able to identify the appropriate materials, tools and equipment for turf maintenance, and supervise the implementation of turf nutrition plan and maintenance plan for common turf areas.

Landscape Operations

On completion of the module, students should be able to supervise the maintenance and implementation of various landscape operations including softscapes, landscape features and facilities. In addition, they should be able to supervise the operation and maintenance of basic landscape machinery and equipment.

Landscape Design and Skyrise Greenery

On completion of the module, students should be able to assist in designing sustainable, themed and cultural landscapes with spatial planning, and prepare site layout. In addition, students should be able assist in designing, managing, installation and maintenance of skyrise greenery.

Landscape Project Management and Coordination

On completion of the module, students should be able to interpret landscape maintenance contract specifications and drawings, assist in the implementation of procurement plans and project schedules. In addition, students should be able to supervise environmental control measures and verify as-built drawings on site.

Horticulture Sciences and Parks Practices

On completion of the module, students should be able to apply the fundamental knowledge of plant anatomy, morphology, taxonomy and nutrition, and soil science to analyse and identify the common plant healthcare issues. Students should be able to supervise the implementation of sustainable horticulture practices, suitable soil amendments, plant healthcare and integrated pest management plans in accordance to horticulture and landscape industry requirements. In addition, students should be able to assist in the managing of Parks recreation, events and visitor-ship, and supervise the implementation of Parks maintenance contracts.

Industry Attachment

Students will undergo 3 months of internship training in landscaping construction and maintenance companies to reinforce the skills and knowledge acquired at the training institute and to develop competencies in other specialized areas.

Electives (Course Specific)

Elementary Land Surveying

On completion of the module, students should be able to perform a site survey using basic surveying equipment. Students will be able to set up and use the surveying equipment, conduct a closed survey and verify basic survey plan to incorporate levels and contours according to landscape specifications.

Electives (Inter-disciplinary)

Water Efficiency in Building

On completion of the module, students should be able to conduct water audit and apply water efficiency measures to reduce water consumption in commercial/residential buildings.

Green Building Technology

On completion of the module, students would be equipped with the fundamental skills and knowledge of green building technologies and design, and incorporate environment-friendly features in building facility design.

Electives (General)

As reflected on pages 277-278.

Life Skills Modules

As reflected on page 281.

HIGHER NITEC IN MARINE ENGINEERING

COURSE SYNOPSIS

On completion of the course, students should be able to

- Perform alignment of marine machinery.
- Perform maintenance of marine control circuits.
- Perform installation and repair of marine machinery.
- Perform supervision work on machining work.
- Perform defect diagnosis of marine systems.
- Assist to execute commissioning and testing activities.
- Perform verification of measuring instruments.
- Perform design and fabrication of jigs and fixtures.
- Perform quality control and assurance.
- Perform inspection of ship systems and machinery components.
- Perform basic maintenance of electrical equipment.

JOB OPPORTUNITIES

Higher Nitec in Marine Engineering graduates are employed by the marine and offshore industry such as marine services contractors, marine equipment manufacturers and suppliers, marine fleet operators and the shipyards. These graduates can provide services such as maintenance and repair of marine systems, assist in executing, commissioning and testing activities, calibration and instrumentation work, quality control and assurance, inspection of ship systems and machinery components. Some of the job titles held by graduates include Assistant Supervisor (Mechanical) / Trainee Supervisor (Mechanical) / Supervisor (Mechanical) / Foreman (Mechanical). There are excellent opportunities for career advancement to supervisory positions and beyond.

LIFE SKILLS MODULES	
Refer to page 281	

Note: The offer of electives is subject to the training schedule of respective ITE Colleges. Students are advised to check with their Class Advisors on the availability of the elective modules they intend to pursue.

MODULE OBJECTIVES

Core Modules

Quality Engineering

On completion of the module, students should be able to conduct preliminary safety inspection, perform hazard identification and risk assessment. Students should also be able to verify general arrangement drawings, monitor quality control systems, perform inspection work on brazed joints, heat treatment of materials, cable arrangement, electrical circuits, and perform dimensional checks of engineering components.

Ship Systems

On completion of the module, students should be able to service, maintain propulsion components system, pneumatic and hydraulic control system components and perform inspection work on deck machinery and alignment of marine machinery.

Marine Propulsion System

On completion of the module, students should be able to troubleshoot and rectify faults in marine propulsion systems, recondition engine components, perform defect diagnosis, measure and adjust engine functional clearances.

Marine Workshop Technology

On completion of the module, students should be able to produce 2-D CAD drawings, perform basic arc welding, gas cutting, machine screw threads and components most commonly used in shipboard repairs. Students should also be able to design, modify and fabricate jigs and fixtures.

Marine Auxiliary Systems

On completion of the module, students should be able to inspect, troubleshoot and rectify machinery components of marine auxiliary systems typically installed on board marine vessels.

Marine Control Systems and Instrumentation

On completion of the module, students should be able to produce electrical single-line drawings, maintain DC and AC equipment, check simple magnetic circuits and systems' parameter, adjust governor setting, and perform functional tests on control systems typically installed on marine vessels.

Industry Attachment

Students will undertake a 6-month industry attachment at shipyards, marine related workshop or work place to gain hands-on marine related practical training.

Electives (Course Specific)

Engineering Watchkeeping

On completion of the module, students should be conversant with the requirements to maintain a safe engineering watch and seaworthiness of the ship, operate main and auxiliary marine machinery and control systems, operate marine electrical power distribution and to ensure compliance with marine pollution prevention requirements.

Shipboard Legislation and Resource Management

On completion of the module, students should be conversant with maintaining operational and maintenance documentation, monitoring compliance with maritime legislative requirements, managing human factor errors and practicing good leadership and teamwork on board ships.

Electives (Inter-Disciplinary)

Basic Naval Architecture

On completion of the module, students should be able to produce lines plans drawings from offset tables, perform ship form and stability calculations.

Ship and Offshore Survey

On completion of the module, students should be able to co-ordinate vessel survey activities, perform survey on steelwork and produce survey report on recommendations of rectified works.

Marine Project Planning and Management

On completion of the module, students should be able to plan, track and monitor projects using project management software.

Electives (General)

As reflected on pages 277-278.

Life Skills Modules

As reflected on page 281.

HIGHER NITEC IN MARINE & OFFSHORE TECHNOLOGY

COURSE SYNOPSIS

On completion of the course, students should be able to

- Interpret general arrangement drawings, pipe and instrument drawings, welding procedure specifications, and test procedures.
- Perform preliminary design of pipe routing plan.
- Perform non-destructive tests on weld metals.
- Perform inspection on brazed joints, pre-welding and post-welding, and alignment of pumps.
- Assist in system testing and commissioning of marine auxiliary system and drilling system.
- Perform planning of work activities such as lifting, erection of supports for assembly works, manpower deployment and work schedule.
- Perform supervision on fabrication and welding.
- Perform quality control checks of welding, painting and blasting, insulation, machinery and electrical installations.

JOB OPPORTUNITIES

Higher Nitec in Marine & Offshore Technology graduates can be employed by shipyards, and other supporting companies which provide services on the repair, fabrication, refurbishment of all types of vessels, offshore structures in the marine and offshore industry. Some of the job titles held by graduates include Assistant Supervisor, Trainee Supervisor, Assistant Marine Supervisor and Foreman. There are excellent opportunities for career advancement to supervisory positions and beyond.

MODULE OBJECTIVES

Core Modules

Quality Engineering

On completion of the module, students should be able to conduct preliminary safety inspection, perform hazard identification and risk assessment. Students should also be able to verify general arrangement drawings, monitor quality control systems, perform inspection work on brazed joints, heat treatment of materials, cable arrangement, electrical circuits, and perform dimensional checks of engineering components.

Ship Systems

On completion of the module, students should be able to service, maintain propulsion components system, pneumatic and hydraulic control systems components; perform inspection work on deck machinery and alignment of marine machinery.

Welding Technology

On completion of the module, students should be able to interpret welding procedures, perform butt, fillet, groove weld joints using submerged arc welding, shield metal arc welding, flux-cored arc welding, gas tungsten arc welding in flat, horizontal and vertical positions. Students should also be able to rectify weld defects, perform non-destructive tests on weld metals and do operational calibration of welding machine.

Fabrication Technology

On completion of the module, students should be able to produce 2-D CAD drawings and sketches of 3-D assembly drawings. Students should also be able to plan resources and work schedules, perform structural markings, read lines plan drawings, carry out development of plates and pipes, material surface inspections, nesting and take-off and prepare load for lifting operations.

Pipe Design and Systems

On completion of the module, students should be able to produce P & ID drawings, isometric drawings of pipe routing plan and prepare pipes cutting plans. Students should also be able to perform pipe spool assembly, dimension checks on pipe spools, and perform leak tests on piping systems.

Offshore Technology

On completion of the module, students should be able to produce electrical single-line drawings, maintain DC and AC equipment, perform dimension control and level checks of offshore structures, co-ordinate the erection of temporary supports, perform leak and watertightness tests and assist in system testing and commissioning.

Industry Attachment

Students will undertake a 6-month industry attachment at shipyards, marine related workshop or work place to gain hands-on marine related practical training.

Electives (Course Specific)

Basic Naval Architecture

On completion of the module, students should be able to produce lines plans drawings from offset tables, perform ship form and stability calculations.

Ship and Offshore Survey

On completion of the module, students should be able to co-ordinate vessel survey activities, perform survey on steelwork and produce survey report on recommendations of rectified works.

Marine Project Planning and Management

On completion of the module, students should be able to plan, track and monitor projects using project management software.

Electives (General)

As reflected on pages 277-278.

Life Skills Modules

As reflected on page 281.

HIGHER NITEC IN MECHANICAL ENGINEERING

COURSE SYNOPSIS

On completion of the course, students should be able to

- Set up machines, equipment and systems.
- Provide support in product improvements.
- Conduct quality assurance functions on products and systems.
- Perform fault diagnosis and maintenance of instrumentation and control equipment.
- Perform sub-system and PLC integration.
- Perform support functions in engineering design and development.

JOB OPPORTUNITIES

Higher Nitec in Mechanical Engineering graduates can be employed by mechanical engineering and precision engineering firms and companies that provide engineering services from front-end engineering design, systems development to maintenance of mechanical equipment and instruments. Some of the job titles held by graduates include Engineering Assistant, Mechanical Engineering Technician, Maintenance Supervisor, Quality Assurance Technician and Quality Process Technician. There are excellent opportunities for career advancement to supervisory positions and beyond.

Note: The offer of electives is subject to the training schedule of respective ITE Colleges. Students are advised to check with their Class Advisors on the availability of the elective modules they intend to pursue.

MODULE OBJECTIVES

Core Modules

Mathematics and Engineering Systems

On completion of the module, students should be able to solve engineering problems involving algebra, indices, graphs, trigonometry and statistics, and to perform electric installations as well as connect pneumatic and hydraulic systems.

CAD and Engineering Design

On completion of the module, students should be able to create 2D drawings of engineering components using a CAD system as well as produce 3D solid models and also to design a mechanical system comprising various machine elements.

Quality Engineering

On completion of the module, students should be able to interpret the Workshop Safety and Health (WSH) regulations, the requirements of ISO 9001 and 14001 under Quality Management System, Lean Six Sigma, and apply fundamental quality tools and techniques for problem solving and quality inspection, and also the use of precision measuring tools with statistical process control capabilities.

Engineering Materials and Mechanics

On completion of the module, students should be able to classify engineering materials, conduct destructive and non-destructive testing and also able to apply the laws and principles of statics and dynamics to design engineering systems.

System Integration and Controls

On completion of the module, students should be able to perform testing, calibration, fault diagnosis and maintenance of instrumentation and control equipment, program PLC system, interface engineering components and sub-systems, as well as install part feeding system and electrical drive system.

Engineering Development and Applications

On completion of the module, students should be able to carry out design and development activities including application of design concepts for a sustainable environment, verify product design, perform rapid prototyping, as well as carry out product design change process and enhancement of product design.

Industry Attachment

On completion of the module, students should be able to acquire and apply a cluster of key technical, social and methodological competencies in their occupation.

Electives (Course Specific)

Conventional Machining

On completion of the module, students should be able to perform machining operations on conventional lathe and milling machines.

Jig and Fixture Design

On completion of the module, students should be able to design and draw a drill jig, turning and milling fixture using CAD software.

Product Prototyping

On completion of the module, students should be able to create simple design of a product using 3-D CAD software and produce a 3-D model of it using basic prototyping devices.

Electives (General)

As reflected on pages 277-278.

Life Skills Modules

As reflected on page 281.

HIGHER NITEC IN MECHATRONICS ENGINEERING

COURSE SYNOPSIS

On completion of the course, students should be able to

- Install, maintain and service pneumatic and electro-pneumatic controlled systems.
- Construct and assemble mechanical support.
- Prepare and interpret electrical and mechanical drawings.
- Install and test electrical systems.
- Install and test peripheral devices and microcomputer controlled systems.
- Troubleshoot electronics systems.
- Set up industrial automation systems, modifies PLC program and troubleshoot a simple automated production system at module level.
- Set up automated manufacturing systems, autovision systems and communication networks.
- Set up and test-run industrial robot with written test program.
- Set up precision motion control systems.

JOB OPPORTUNITIES

Higher Nitec in Mechatronics Engineering graduates are generally employed by engineering firms using cutting edge and high-technology equipment and automated system. Some of the job titles held by graduates include Automation Technician, Engineering Assistant, Industrial Engineering Technician, Mechatronics Technician, Plant Maintenance Technician, Production Supervisor and Associate Engineer. The increasing demand in widely use of robotics and automation technology in healthcare, construction, manufacturing and logistics industries will certainly enhance the career prospect for graduates moving forward.

Note: The offer of electives is subject to the training schedule of respective ITE Colleges. Students are advised to check with their Class Advisors on the availability of the elective modules they intend to pursue.

MODULE OBJECTIVES

Core Modules

CAD and Mechanical Applications

On completion of this module, students should be able to read, interpret and produce common geometrical and mechanical drawings using Computer-Aided Drafting (CAD) software; use common tools and equipment to fabricate and service simple mechanical elements and assemble aluminium profile structures.

Electrical and Electronics Applications

On completion of this module, students should be able to analyse circuit schematic and board layout; and perform in-circuit measurement. They should also be able to identify faulty components and replace them. Students should also be able to conduct performance test to ensure that the circuit is working as intended.

Pneumatics and Automation

On completion of the module, students should be able to apply electro-mechanical control systems, including common input/output devices, pneumatics and electro-pneumatics systems in industrial automation.

PLC and Motor Control

On completion of the module, students should be able to apply Programmable Logic Controller (PLC) programming to interface and control PLC-controlled applications and to use advanced PLC instructions to program PLC intelligent modules for industrial automations.

Cyber Physical Systems

On completion of this module, students should be able to troubleshoot and maintain the sub-systems associated with a Cyber Physical System / flexible manufacturing system, such as Conveyor, Automated Guided Vehicle, Automated Storage and Retrieval, Data Identification, Machine Vision, Human Machine Interface, Supervisory Control, Data Acquisition, Internet of Things, Communication Networking, Quality Assurance, Process Control and Maintenance Management.

Robotics Systems

On completion of this module, students should be able to set up, program, operate, troubleshoot and maintain a robotic system, and solve engineering problems involving statics, dynamics, kinematics and kinetics. Students are also trained to apply microcontroller programming concepts used in control circuits of microcontroller-based equipment.

Industry Attachment

On completion of the module, students should be able to acquire and apply a cluster of key technical, social and methodological competencies in the occupation.

Electives (Course Specific)

Hydraulics

On completion of the module, students should be able to maintain hydraulic systems in industrial automation.

Single Board Micro-controller Applications

On completion of the module, students should be able to write structured programs to interface with peripheral devices and solve simple problems using single board micro-controller.

Lean Manufacturing

On completion of the module, students should be able to work effectively as a team member to support lean manufacturing and process improvement in the industries and apply PDCA in continuous process improvement to increase productivity.

Electives (Joint ITE-Industry)

Integration of Vision with Servo Control

On completion of the module, students should be able to implement a vision inspection system, perform servo motor control and interface vision system with servo motor control for inspection process.

Robot Palletizing Operations and Programming

On completion of the module, students should be able to operate the palletizing robot system, including editing and modifying programs for different palletizing operations.

Electives (General)

As reflected on pages 277-278.

Life Skills Modules

As reflected on page 281.

HIGHER NITEC IN OFFSHORE & MARINE ENGINEERING DESIGN

COURSE SYNOPSIS

On completion of the course, students should be able to prepare working drawings and assist in the offshore and marine engineering design with application software for the following areas:

- Offshore and marine accommodation
- Offshore and marine life savings and fire-fighting appliances
- Offshore and marine structure
- Offshore and marine piping system including piping for fuel oil, lubrication, engine exhaust, hydraulics, pneumatics and water supply
- Offshore and marine electrical system and controls
- Offshore and marine heating, ventilation and air- conditioning (HVAC) systems

JOB OPPORTUNITIES

Higher Nitec in Offshore & Marine Engineering Design graduates are employed by shipyards and other supporting companies which design and provide services on the repair, fabrication, refurbishment of all types of vessels, offshore structures in the marine and offshore industry. Some of the job titles held by graduates include Offshore & Marine Engineering CADD Specialist, Offshore & Marine Engineering Assistant Designer and Offshore & Marine Structure Draughtsman. There are excellent opportunities for career advancement to supervisory positions and beyond.

MODULE OBJECTIVES

Core Modules

Engineering Graphics

On completion of the module, students should be able to produce technical sketches, engineering detailed drawings, 3D solid modeling and assembly drawings in accordance with ISO standards.

Engineering Mathematics and Statics

On completion of the module, students should be able to apply knowledge of mathematics to solve engineering problems involving the use of algebra, indices, logarithms, trigonometry and basic statistics. Students would also be equipped with the fundamental knowledge of statics and be able to solve engineering problems involving equilibrium of bodies subjected to forces.

Offshore and Marine Structure Design

On completion of the module, students should be able to use the latest 3D CAD software to perform offshore and marine initial design and to prepare general arrangement and structural drawings in accordance to the standards and classification society requirements.

Offshore and Marine Electrical System Design

On completion of the module, students should be able to use the latest 3D CAD software to design electrical system of a ship, including control and communication system, and to prepare the drawings in accordance to the standards and classification society requirements.

Offshore and Marine Piping System Design

On completion of the module, students should be able to use the latest 3D CAD software to design mechanical piping, marine system, life safety and fire-fighting appliance of a ship, and to prepare drawings in accordance to the standards, classification society, Safety of Life at Sea (SOLAS) and International Organization (IMO) requirements.

Offshore and Marine HVAC System Design

On completion of the module, students should be able to estimate the cooling load of a ship, use the latest 3D CAD software to design air-conditioning and mechanical ventilation ducting, heating system and to prepare working drawings for ducting layouts and related pipe work in accordance to the standards and classification society requirements.

Industry Attachment

Students will undertake a 6-month industry attachment at the shipyards and design consultancy companies in the marine sector to complement and reinforce the skills and knowledge acquired at ITE and to develop other competencies in other specialized areas.

Electives (Course Specific)

Solid Modelling

On completion of the module, students would be able to appreciate the benefits of parametric modelling and be able to use the 3D modelling software to perform mechanical design and prepare working and presentation drawings.

Engineering Project Management

On completion of the module, students should be able to apply the tools and techniques that enable the project team to organize and manage their project work to meet requirements and challenges.

Electives (General)

As reflected on pages 277-278.

Life Skills Modules

As reflected on page 281.

HIGHER NITEC IN PRECISION ENGINEERING

COURSE SYNOPSIS

On completion of the course, students should be able to

- Prepare job requirements.
- Create, interpret and edit CNC part program.
- Perform tooling setup.
- Perform CNC machining to produce precise parts.
- Troubleshoot machining faults.

JOB OPPORTUNITIES

Higher Nitec in Precision Engineering graduates are employed as technical specialist by a wide range of niche manufacturing industries, in particular the Aerospace, Semiconductor, Oil and Gas, Medical Technology, as well as Precision Modules and Components, and Machinery and Systems sectors. There are excellent opportunities for career advancement to supervisory positions and beyond.

CERTIFICATION

Credits required for certification:

MODULE OBJECTIVES

Core Modules

Advanced Materials and Metrology

On completion of the module, students should be able to describe the properties and applications of engineering plastics, metals and non-metals, alloys, and exotic materials, and applications of various heat treatment and surface treatment processes. They should also be able to interpret geometrical dimensioning & tolerances, perform measurement of parts with geometrical form and feature using gauges and complex measuring instruments including CMM, and generate quality control reports.

Advanced Machining and Tool Management

On completion of the module, students should be able to interpret blueprint drawings, create CNC part programs using CAM system, perform tooling setup, perform process planning, optimize CNC machining processes and machining parameters involving tool management, produce precise parts to specifications using CNC machines, and troubleshoot machining faults. They should also be able to select appropriate cutting tools for machining different materials, and perform inspection on machined parts using appropriate measuring tools.

Industry Attachment

On completion of the module, students should be able to acquire and apply a cluster of key technical, social and methodological competencies in their occupation.

Electives (Inter-disciplinary) Product Prototyping

On completion of the module, students should be able to create simple design of a product using 3D CAD software and produce a 3D model of it using basic prototyping devices.

Electives (General)

As reflected on pages 277-278.

Life Skills Modules

As reflected on page 281.

HIGHER NITEC IN PROCESS PLANT DESIGN

COURSE SYNOPSIS

On completion of the course, students should be able to prepare working drawings and assist in the design of process plants with application software for the following areas:

- Process piping system including P & ID (Process and Instrumentation) diagrams, piping layouts and details, tanks and vessels
- Process plant mechanical components and assembly
- Process plant structures including steel frame structures and civil foundation
- Process plant piping support

JOB OPPORTUNITIES

Higher Nitec in Process Plant Design graduates are employed by companies involved in Front End Engineering Design (FEED), Engineering, Procurement, Construction/ Design (EPC/ EPCD) for the Oil and Gas, Petrochemical and Pharmaceutical Industries. Some of the job titles held by graduates include Process Plant CADD Specialist, Process Plant Assistant Designer and Process Piping Draughtsman. There are excellent opportunities for career advancement to supervisory positions and beyond.

Engineering Mathematics and Statics

On completion of the module, students should be able to apply knowledge of mathematics to solve engineering problems involving the use of algebra, indices, logarithms, trigonometry and statistics. Students would also be equipped with the fundamental knowledge of statics, and be able to solve engineering problems involving equilibrium of bodies subjected to forces.

Plant Equipment Design

On completion of the module, students should be able to identify general plant equipment and perform basic design of plant facilities and prepare equipment layouts in accordance with the process industry codes and standards.

Piping and Plant Layout Design

On completion of the module, students be able to identify general piping components and prepare flow diagrams, piping layouts and piping details with material-take-off in accordance with the process industry codes and standards.

Piping Support and Structural Design

On completion of the module, students would be able to perform basic design of pipe support and prepare piping support detail drawings and structural drawings in accordance with design codes and standards.

Plant System Modelling

On completion of the module, students be able to create model of a process plant using 3D CAD software to verify the integrity of the plant model by performing clash and data consistency checks.

Industry Attachment

Students will be attached to Oil and Gas and Petrochemical companies to complement and reinforce the skills and knowledge acquired at ITE and to develop competencies in other specialized areas.

Electives (Inter-disciplinary)

Engineering Project Management

On completion of the module, students should be able to apply the tools and techniques that enable the project team to organize and manage their project work to meet requirements and challenges.

HIGHER NITEC IN RAPID TRANSIT ENGINEERING

COURSE SYNOPSIS

On completion of the course, students should be able to

- Maintain rapid transit communication systems.
- Maintain rapid transit signaling systems.
- Maintain rapid transit integrated supervisory control system.

JOB OPPORTUNITIES

Higher Nitec in Rapid Transit Engineering graduates, with their breadth and depth of skills and knowledge in a wide range of rapid transit technologies and systems, would be able to find attractive employment opportunities with mass rapid transit operators (SMRT, SBS Transit), Land Transport Authority, Government planning agencies as well as companies dealing in high tech systems and equipment for the rail industry. Some of the job titles would include Rapid Transit Technical Officer in the areas of Trains, Rolling Stock, Permanent Way, Electrical Systems, Communications, Signaling and Supervisory Control.

There are excellent opportunities for career advancement to supervisory and senior engineering positions and beyond.

LIFE SKILLS MODULES	
Refer to page 281	

Note: The offer of electives is subject to the training schedule of respective ITE Colleges. Students are advised to check with their Class Advisors on the availability of the elective modules they intend to pursue.

MODULE OBJECTIVES

Core Modules

Engineering Fundamentals and Rail Tracks

On completion of the module, students should be able to explain the details and operation of the rail network and infrastructure in Singapore; interpret railway engineering and blueprint drawings and also perform and/or supervise the maintenance of rail tracks and rail engineering components in accordance with railway industry standards and workplace safety regulations.

Rapid Transit Power Distribution System

On completion of the module, students should be able to explain the principles, operation and also perform and/or supervise the maintenance of electrical circuits, machines, installations, equipment and rapid transit electrical power distribution system in accordance with the relevant codes of practice and railway industry standards and regulations.

Electronics and Sensor Technology

On completion of the module, students should be able to explain the principles, operation, applications and also perform and/or supervise the maintenance of electronics components, logic circuits, electro-mechanical devices, operational amplifiers, power rectification, oscillators, pulse width modulation circuits, encoders and decoders and sensors and transducers in accordance with the railway industry standards and regulations.

Rapid Transit Control and Rolling Stock

On completion of the module, students should be able to explain the principles, operation, applications and also perform and/or supervise the maintenance of pneumatic and electro-pneumatic, building automation, fire protection and PLC systems, rolling stock equipment and train equipment in accordance with railway industry standards and regulations.

Rapid Transit Signaling Systems

On completion of the module, students should be able to explain the principles, operation and perform and/or supervise the maintenance of rapid transit signaling devices, circuits and systems in accordance with railway industry standards and regulations.

Rapid Transit Communications Systems

On completion of the module, students should be able to explain the principles, operation and perform and/or supervise the maintenance of rapid transit communication devices, circuits and systems in accordance with railway industry standards and regulations.

Rapid Transit Integrated Supervisory Control System

On completion of the module, students should be able to explain the principles, operation and perform and/or supervise the inspection and maintenance of rapid transit supervisory control and station equipment in accordance with railway industry standards and regulations.

Industry Attachment

Students will undergo 3 months of attachment during which they will be immersed in an authentic real work environment and be provided with the opportunity to integrate and apply a cluster of key technical, social and methodological competencies in performing structured work under supervision in one or more of the following areas, namely track, rolling stock, electrical systems, electronics, communication systems, signaling systems, supervisory control systems and station equipment.

Electives (General)

As reflected on pages 277-278.

Life Skills Modules

As reflected on page 281.

HIGHER NITEC IN ROBOTICS & SMART SYSTEMS

COURSE SYNOPSIS

On completion of the course, students should be able to

- Set up robotic systems.
- Maintain robotic control systems.
- Set up and maintain mobile robot.
- Set up smart sensor system.
- Design and produce end effectors.
- Program human robot interface.
- Set up microcontroller system.

JOB OPPORTUNITIES

Higher Nitec in Robotics & Smart Systems graduates are generally employed in robotics industries requiring Robotics Technicians to plan and manage projects ranging from specifying project requirements and brainstorming to operating and maintaining fully-functional robots.

MODULE OBJECTIVES

Core Modules

Robotics and Applications

On completion of this module, students should be able to install, program, operate, troubleshoot Industrial and collaborative robotic system.

Electrical Applications

On completion of this module, students should be able to setup electrical control system, construct and troubleshoot electronic circuits through interpretation, designing and testing of the circuits that include analogue and digital components.

Mobile Robotics and Control

On completion of this module, students should be able to apply knowledge of localisation, mapping and obstacles avoidance to perform navigation on mobile robotics platform.

Smart Sensors and Integration

On completion of the module, students should be able to install, integrate, troubleshoot the smart sensor system, and apply the system into Industry 4.0 and Internet of Things (IoT).

End Effectors

On completion of this module, students should be able to design end effector using 3D solid modelling, produce end effector using 3D printing, and test end effector based on its application.

Smart Systems and Programming

On completion of this module, students should be able to install, configure and test the robot vision system and acquire the images through network protocol for analysis; and to apply microcontroller programming concept to control microcontroller-based devices and equipment.

Industry Attachment

On completion of this module, students should be able to acquire and apply a cluster of key technical, social and methodological competencies in the occupation.

Electives (Course Specific)

Hydraulics

On completion of the elective, students should be able to install hydraulic systems in industrial automation.

Single Board Micro-controller Applications

On completion of the elective, students should be able to write structured programs to interface with peripheral devices and solve simple problems using single board micro-controller.

Electives (Joint ITE-Industry)

Robot Palletizing Operations and Programming

On completion of the module, students should be able to operate the palletizing robot system, including editing and modifying programs for different palletizing operations.

Electives (General)

As reflected on pages 277-278.

Life Skills Modules

As reflected on page 281.

NITEC IN AEROSPACE AVIONICS

COURSE SYNOPSIS

On completion of the course, students should be able to

- Perform maintenance of electrical wiring looms and related systems.
- Perform maintenance of electrical and electronics systems.
- Assist to perform operational tests on the instrumentation system.
- Assist to perform operational tests on the radio system.
- Perform general aircraft general maintenance.

JOB OPPORTUNITIES

Nitec in Aerospace Avionics graduates are employed by aerospace companies, which maintain and repair aircraft instrumentation, radio system and avionic system. Some of the job titles held by graduates include Aircraft Technician (Avionics Trade), Aircraft Maintenance Technician and Avionics Technician. There are excellent opportunities for career advancement to supervisory positions and beyond.

CERTIFICATION

LIFE SKILLS MODULES	
Refer to page 281	

Note: The offer of electives is subject to the training schedule of respective ITE Colleges. Students are advised to check with their Class Advisors on the availability of the elective modules they intend to pursue.

MODULE OBJECTIVES

Core Modules

Aircraft General Maintenance

On completion of the module, students should be able to perform aircraft general maintenance such as fastening, wire-locking, sealant application, general corrosion control and plumbing; interpret aircraft blueprint drawings, aircraft manuals and catalogues.

Human Factors and Air Legislation

On completion of the module, students should be able to carry out Workplace, Safety and Health concepts in aircraft maintenance works and to prevent and minimise human-factor related errors in aircraft maintenance, update maintenance records and documentation and to apply the regulatory framework of local air transport operations and governing system adopted by Civil Aviation Authority of Singapore.

Aircraft Electrical and Electronics Systems

On completion of the module, students should be able service, maintain and troubleshoot different types of aircraft electrical system and devices.

Aircraft Instrumentation System

On completion of the module, students should be able service, maintain and troubleshoot aircraft instrumentation system.

Aircraft Materials and Structures

On completion of the module, students should be able to repair minor surface aircraft structure defects and apply basic Aerodynamic and Theory of Flight.

Aircraft Communication and Navigation Systems

On completion of the module, students should be able to service, maintain and troubleshoot aircraft communication and navigation systems.

Aircraft Maintenance Practice

Students will undergo a 6-month On-the-Job Training (OJT) course with aerospace industry to reinforce the skills and knowledge acquired at the training institute and to develop competencies in other specialized areas.

Electives (Inter-disciplinary)

TIG Welding

On completion of the module, students should be able to join sheet metal and rebuild metal using TIG welding process.

Non-Destructive Testing

On completion of the module, students should be able to understand the working principles of non-destructive testing (NDT) methods used for detecting defects in the aircraft components/structures.

Basic Principle of Helicopter

On completion of the module, students should be able to understand the basic principles of aerodynamics in helicopters and the various types of rotors used to achieve lift. They should also be able to identify the various parts of the helicopter and mechanism and controls used in changing of blade pitch.

Composite Structure Repairs

On completion of the module, students should be able to perform cold and hot bonding on honeycomb structures using fibreglass wet and epoxy resin material (cold bonding) and wet layup pre-preg, metal skin materials and foam core material. Students will also be trained on inspection of damaged structures and post bonding inspection and testing.

Electives (General)

As reflected on pages 279-281.

Life Skills Modules

As reflected on page 281.

NITEC IN AEROSPACE MACHINING TECHNOLOGY

COURSE SYNOPSIS

On completion of the course, students should be able to

- Generate CNC part-program using CAD/CAM system.
- Set up multi-axis CNC machining centres.
- Operate and monitor precision machining operations.
- Manufacture aerospace components.
- Perform quality checks.

JOB OPPORTUNITIES

Nitec in Aerospace Machining Technology graduates are employed as manufacturing specialist by high value manufacturing industries, in particular the Aerospace, Oil and Gas, Precision Modules and Components, Medical Technology, Transport Engineering, and Machinery and Systems sectors. There are excellent opportunities for career advancement to supervisory positions and beyond.

Note: The offer of electives is subject to the training schedule of respective ITE Colleges. Students are advised to check with their Class Advisors on the availability of the elective they intend to pursue.

MODULE OBJECTIVES

Core Modules

Engineering Drawing and Inspection Techniques

On completion of the module, students should be able to interpret technical drawings and perform dimensional inspections for the machined components in accordance with ISO standards.

Engineering Process (Turning)

On completion of the module, students should be able to set up and operate centre lathes and CNC lathes to produce components in accordance with given specifications.

Engineering Process (Milling)

On completion of the module, students should be able to set up and operate conventional milling machines and CNC milling machines to produce components in accordance with given specifications.

3D CAD/CAM Applications

On completion of the module, students should be able to interpret engineering drawings, create 3D CAD models and, generate and verify CNC part programs using a CAD/CAM system for CNC lathes and CNC milling machines.

Aerospace Machining

On completion of the module, students should be able to develop part program for aerospace parts, set up and operate CNC high speed machining centres to manufacture engine and structural aerospace parts and components.

Multi-Axis Programming and Machining

On completion of the module, students should be able to develop multi-axis part program, set up and operate 5-axis CNC universal machining centres to manufacture components in a single set up for the aerospace and oil & gas industries.

Industry Attachment

On completion of the module, students should be able to acquire and apply a cluster of key technical, social and methodological competencies in their occupation.

Electives (Course Specific)

Assembly Skills

On completion of the module, students should be able to select and use the correct hand tools for assembly and dismantle of mechanical components.

Co-ordinate Measuring Techniques

On completion of the module, students should be able to understand the fundamentals of co-ordinate measuring techniques. They will be able to operate and apply the application to perform mathematical alignment of various simple geometrical components and obtain the measured results as required.

Grinding

On completion of the module, students should be able to interpret technical drawings, grind components safely using a surface grinder and cylindrical grinder and supporting tools in accordance with given specific.

CNC EDM (Die-sink & Wire-cut)

On completion of the module, students should be able to interpret technical drawings, produce components safely using a CNC EDM Die-sink machine and CNC EDM Wire-cut machine and supporting tools in accordance with given specific.

Electives (Inter-disciplinary)

Design Conceptualization and Rapid Prototyping

On completion of the module, students should be able to create a 3D solid model using CAD software and to operate the rapid prototyping printing machine to generate the 3D model.

Electives (General)

As reflected on pages 279-281.

Life Skills Modules

As reflected on page 281.

NITEC IN AEROSPACE TECHNOLOGY

COURSE SYNOPSIS

This is a Singapore Airworthiness Requirements Part-147 (SAR-147) course currently approved by the Civil Aviation Authority of Singapore (CAAS).

On completion of the course, students should be able to

- Maintain aircraft hydraulic system.
- Maintain aircraft and engine pneumatic systems.
- Maintain aircraft and engine electrical systems.
- Maintain aircraft flight control system.
- Maintain aircraft and engine fuel systems.
- Maintain aircraft environmental control system.
- Maintain aircraft landing gear system.
- Perform maintenance and periodic inspection on aircraft and engines.
- Repair aircraft damaged skin and structural members.
- Repair non-metallic material such as composites.
- Assist in aircraft towing.
- Operate aircraft support equipment.
- Assist to prepare aircraft and engine for engine ground runs.

JOB OPPORTUNITIES

Nitec in Aerospace Technology graduates are employed by aerospace companies, which involved airframe maintenance, engine maintenance and structural system repair. Some of the job titles held by graduates include Aircraft Technician, Aircraft Engine Technician, Aircraft Structural Repair Technician and Aircraft Sheet Metal Technician. There are excellent opportunities for career advancement to supervisory positions and beyond.

MODULE OBJECTIVES

Core Modules

Aircraft General Maintenance

On completion of the module, students should be able to perform aircraft general maintenance such as fastening, wire-locking, sealant application, general corrosion control and plumbing, interpret aircraft blueprint drawings, aircraft manuals and catalogues.

Aircraft Electrical System Maintenance

On completion of the module, students should be able to carry out electrical crimping, splicing and terminating electrical wires, use and calibrate measuring and testing instruments, handle Electrostatic Discharge Sensitive (EDS) devices, perform soldering of electrical and electronic components and inspect fibre-optics cables.

Airframe Maintenance

On completion of the module, students should be able to repair minor surface defects of aircraft sheet metal, corroded sheet metal, aircraft structural materials, composite structure, parts components and fibre-glass materials. They are also trained to perform cold and hot bonding, basic repair of cabin interiors, and riveting and blasting on sheet metal.

Human Factors and Air Legislation

On completion of the module, students should be able to carry out Workplace Safety and Health practices during aircraft maintenance works and prevent and minimise human-factor related errors in aircraft maintenance. They are also trained to update maintenance records and documentation, and to apply the regulatory framework of local air transport operations and governing system from Civil Aviation Authority of Singapore.

Aircraft System Maintenance

On completion of the module, students should be able to perform general maintenance and lubrication on aircraft components, prepare aircraft for towing and jacking, inspect structural defects and damage, and maintain aircraft pneumatics, hydraulics, flight controls, fuel, landing gear, environment control systems, emergency equipment and fire protection system.

Aircraft Propulsion Maintenance

On completion of the module, students should be able to assist in rigging and trimming of engine in test-cell environment, carry out of periodic inspections and maintenance on aircraft engines and propellers, and prepare aircraft for engine test run.

Industry Attachment

Students will undergo 6-month Industry Attachment programme in the aerospace industry to reinforce the skills and knowledge acquired at the training institute and develop competencies in other specialized areas.

Electives (Course Specific)

TIG Welding

On completion of the module, students should be able to join sheet metal and rebuild metal using TIG welding process.

Non-Destructive Testing

On completion of the module, students should be able to apply the working principles of non-destructive testing (NDT) methods used for detecting defects in the aircraft components/structures.

Basic Principle of Helicopter

On completion of the module, students should be able to interpret the basic principles of aerodynamics in helicopters and the various types of rotors used to achieve lift. They should also be able to identify the various parts of the helicopter and mechanism and controls used in changing of blade pitch.

Composite Structure Repairs

On completion of the module, students should be able to perform cold and hot bonding on honeycomb structures using fibreglass wet and epoxy resin material (cold bonding) and wet lay-up pre-preg, metal kin materials and foam core material. Students will also be trained on inspection of damaged structures and post bonding inspection and testing.

Applied Aviation Science and Mathematics

On completion of the module, students should be able to apply fundamentals of mathematics, law of physics and basic aerodynamics principles to solve engineering related problems which are applicable to aircraft flight and ground operations.

Electives (General)

As reflected on pages 279-281.

Life Skills Modules

As reflected on page 281.

NITEC IN AUTOMOTIVE TECHNOLOGY (HEAVY VEHICLES)

COURSE SYNOPSIS

On completion of the course, students should be able to maintain, service, repair and troubleshoot the following systems in a heavy vehicle:

- Engine mechanical and management systems
- Suspension and steering systems
- Brake system
- Drivetrain system
- Electrical system
- Air-conditioning system

JOB OPPORTUNITIES

Nitec in Automotive Technology (Heavy Vehicles) graduates are employed by fleet maintenance workshops, public transport companies, distributors of heavy diesel plant and vehicles, service garages and government agencies. Some of the job titles held by graduates include Truck or Bus Service Technician and Diesel Engine Service Technician. There are excellent opportunities for career advancement to supervisory positions and beyond.

MODULE OBJECTIVES

Core Modules

Automotive Principles and Systems

On completion of the module, students should be able to observe workplace health and safety, extract technical information, select and use lifting equipment and hand tools to disassemble and reassemble automotive components as well as the proper disposal of automotive wastes.

Basic Chassis and Drivetrain Technology

On completion of the module, students should be able to service and replace automotive drivetrain and chassis components like manual transmission clutch and brakes.

Basic Engine Technology

On completion of the module, students should be able to service engine system components of spark ignition and compression ignition engines.

Autotronics

On completion of the module, students should be able to interpret, measure, diagnose and rectify faults in vehicle electrical systems, electronic circuits and air-conditioning systems.

Chassis and Drivetrain Technology (Heavy Vehicles)

On completion of the module, students should be able to diagnose and rectify faults in steering, suspension, braking systems as well as driveline system components.

Engine Technology and Powertrain Management (Heavy Vehicles)

On completion of the module, students should be able to diagnose and rectify faults in engine and powertrain management systems.

Industry Attachment

On completion of the module, students should be able to acquire and apply a cluster of key technical, social and methodological competencies in their occupation.

Electives (Course Specific)

Basic Electro-Pneumatics and Hydraulics

On completion of the module, students should be able to assemble, perform fault diagnosis and rectification of basic electro-pneumatics and electro-hydraulic circuits used on heavy vehicles.

Workshop Supervision and Customer Reception

On completion of the module, students should be able to supervise servicing jobs and communicate to customers using good customer service skills.

Vehicle and Motorcycle Inspection

On completion of the module, students should be able to perform roadworthiness inspection and tests on vehicles and motorcycles.

Basic Motorcycle Service and Maintenance

On completion of the module, students should be able to perform basic service and replacement of components in the lubrication, brake and ignition system of a motorcycle.

Electives (Inter-disciplinary)

Project Management

On completion of the module, students should be able to use a software application for planning and managing projects.

Electives (General)

As reflected on pages 279-281.

Life Skills Modules

As reflected on page 281.

NITEC IN AUTOMOTIVE TECHNOLOGY (LIGHT VEHICLES)

COURSE SYNOPSIS

On completion of the course, students should be able to maintain, service, repair and troubleshoot the following systems in a light vehicle:

- Engine mechanical system
- Spark ignition and compression ignition engine management systems
- Suspension and steering systems
- Brake system
- Transmission system
- Electrical system
- Air-conditioning system
- Supplemental restraint system (SRS)

JOB OPPORTUNITIES

Nitec in Automotive Technology (Light Vehicles) graduates are employed by fleet maintenance workshops, service garages, franchised motor dealers, vehicle inspection centres and government agencies. Some of the job titles held by graduates include Motor Vehicle Service Technician, Service Adviser and Vehicle Inspector. There are excellent opportunities for career advancement to supervisory positions and beyond.

NITEC IN BUILT ENVIRONMENT (MECHANICAL & ELECTRICAL SERVICES)

COURSE SYNOPSIS

On completion of the course, students should be able to

- Service and diagnose faulty components for air-conditioning and mechanical ventilation equipment
- Conduct routine tests and servicing on fire detection and fire protection system
- Service, diagnose and rectify faults in electrical system and emergency system
- Service and diagnose faulty mechanical equipment
- Maintain building works
- Maintain water supply and sanitary pipework and fixtures;
- Set up audio-video and public address systems
- Conduct routine checks on security systems (CCTV).

JOB OPPORTUNITIES

Nitec in Built Environment (Mechanical & Electrical Services) graduates are employed by companies providing building management and maintenance services. Some of the job titles held by graduates include Building Maintenance Technician, Facilities Technician and Air-Conditioning Technician. There are excellent opportunities for career advancement to supervisory positions and beyond.

MODULE OBJECTIVES

Core Modules

Electrical Services

On completion of the module, students should be able to interpret electrical circuit diagrams; install conduits and trunkings; replace light fittings and accessories; rectify faults in electrical circuits; and conduct insulation resistance and continuity tests.

Mechanical Services

On completion of the module, students should be able to carry out basic repairs on mechanical parts, service centrifugal pump, motor-drive assembly, air-cooled petrol and liquid-cooled diesel-driven portable generator, as well as replace faulty component of drive mechanism and door fittings.

Residential Air-Conditioning Services

On completion of the module, students should be able to install refrigeration piping system, install unitary and split-type air conditioners, replace faulty fan coil and condensing unit, and carry out preventive maintenance of a residential air-conditioning system, water cooler and dehumidifier.

Piping and Plumbing Services

On completion of the module, students should be able to repair water supply and sanitary piping system, replace piping fittings, sanitary fixtures, rectify faulty water heaters, clear pipe and drain chokes, and inspect water pump and control systems.

Specialisation Modules

Health, Safety and Environment

On completion of the module, students should be able to comprehend HSE regulations and framework, identify environmental and safety hazards in workplace, implement appropriate risk controls, and apply safety requirements for working at height.

Sustainable Air-Conditioning and Refrigeration Technology

On completion of the module, students should be able to interpret ducting and piping layout drawings of an air-conditioning system, carry out balancing of airflow in an air distribution system, perform maintenance of chilled and condenser water piping system, air distribution system and air-conditioning equipment as well as functionality checks on Building Management System. Students will also learn the various sustainable air-conditioning and refrigeration technologies adopted in modern green buildings.

Fire Detection and Protection Systems

On completion of the module, students should be able to interpret building mechanical system plan, inspect fire alarm and detection system, service fire-fighting equipment such as hose reel system, riser system, private hydrant system and automated system, and perform inspection of emergency voice communication system, fire extinguishers and fire suppression system.

Industry Attachment

Students will be attached to relevant companies to reinforce the skills and knowledge acquired at ITE as well as gain professional and working experience.

Electives (Course Specific)

Energy Audit

On completion of the module, students should be able to conduct on-site basic energy audit using the appropriate measuring instruments and tools; and recommend corrective measures for energy savings

Electives (Joint ITE-Industry)

Swimming Pool Maintenance

On completion of the module, students should be able to carry out servicing, maintenance, repairs on swimming pool filtration system, and its equipment including carrying out water quality checks.

Pest Management

On completion of the module, students should be able to carry out pest inspection work, prepare work site for pest management, use pesticides and pest management equipment, prepares pesticides and supervise pest control operations performed by workers hired by the company. Upon completion of the course, students will be qualified to be licensed as technicians under the Control of Vectors and Pesticides Act 1998.

Electives (General)

As reflected on pages 279-281.

Life Skills Modules

As reflected on page 281.

NITEC IN BUILT ENVIRONMENT (VERTICAL TRANSPORTATION)

COURSE SYNOPSIS

This course provides students with the technical skills and knowledge to maintain, troubleshoot, repair and inspect traction lifts and escalators in residential, institutional and commercial buildings in accordance with codes of practice and statutory requirements and engineering specifications.

On completion of the course, students should be able to

- Maintain and replace lift and escalator equipment.
- Perform lift and escalator routine and periodic maintenance works.
- Diagnose and troubleshoot defects and faults in lift and escalator installations, including performing lift rescue operations when required.
- Repair/replace faulty components and recommission lifts and escalators.
- Assist lift engineer in the installation, testing, adjustment and commissioning of lift and escalator systems and equipment.

JOB OPPORTUNITIES

Nitec in Built Environment (Vertical Transportation) graduates can be employed by companies that market, install and/or provide maintenance services for lifts and escalators. Some of the job titles that are held by graduates include Lift & Escalator Technician, Mechanical & Electrical Maintenance Technician and Building Maintenance Technician. There are excellent opportunities for career advancement to supervisory positions and beyond.

Piping and Plumbing Services

On completion of the module, students should be able to repair water supply and sanitary piping system, replace piping fittings, sanitary fixtures, rectify faulty water heaters, clear pipe and drain chokes, and inspect water pump and control systems.

Specialisation Modules

Lift and Escalator System and Equipment Maintenance

On completion of the module, students should be able to identify and explain the operation, interpret lift drawings, as well as maintain, service and repair mechanical equipment and components of lift and escalator system in accordance with lift engineering specifications and codes of practice.

Lift and Escalator Power and Control System Maintenance

On completion of the module, students should be able to maintain, service and repair lift controllers, electrical equipment, cables, components, as well as safety switches of lift and escalator systems in accordance with lift engineering specifications and codes of practice, including performing functionality checks of lift control system connection to BMS.

Lift and Escalator System Inspection and Testing

On completion of the module, students should be able to inspect and evaluate the condition of a lift hoistway, oversee the correct installation of lift equipment and components, as well as carry out heat run and commissioning tests on lift systems in accordance with lift engineering specifications and codes of practice. Students should also be able to troubleshoot, adjust and carry out routine and periodic maintenance of lift system and equipment, perform mandatory lift and escalator tests, as well as identify and recommend upgrading and improvement works to clients.

Industry Attachment

On completion of the module, students should be able to acquire and apply a cluster of key technical, social and methodological competencies in the occupation.

Electives (Course Specific)

Energy Audit

On completion of the module, students should be able to conduct on-site energy audit using the appropriate measuring instruments and tools and recommend corrective measures for energy savings.

Building Fire-Fighting and Protection Systems

On completion of the module, students should be able to service fire alarm and detection system, inspect one and two- ways emergency voice communication systems, automated sprinkler system, fire-fighting hydrants, hose reel system, fire suppression system and inspect portable types of fire extinguishers.

Electives (Joint ITE-Industry)

Swimming Pool Maintenance

On completion of the module, students should be able to carry out servicing, maintenance, repairs on swimming pool filtration system, and its equipment including carrying out water quality checks.

Pest Management

On completion of the module, students should be able to carry out pest inspection work, prepare work site for pest management, use pesticides and pest management equipment, prepares pesticides and supervise pest control operations performed by workers hired by the company. NITEC IN DIGITAL & PRECISION ENGINEERING

COURSE SYNOPSIS

On completion of the course, students should be able to

- Generate CNC part-programs using advanced CAD/CAM system.
- Monitor and control digital manufacturing processes.
- Manufacture precision components using laser, additive & machining technologies.
- Perform quality checks.

JOB OPPORTUNITIES

Nitec in Digital & Precision Engineering graduates are employed to work in related manufacturing industry in particular the Aerospace, Oil & Gas, Precision Modules & Components, Medical Manufacturing, Transport Engineering and Machinery & Systems sectors.

On completion of the module, students should be able to interpret technical drawings and perform dimensional inspections for the machined components in accordance with ISO standards.

Engineering Process (Turning)

On completion of the module, students should be able to set up and operate conventional and CNC lathes to produce components in accordance with given specifications.

Engineering Process (Milling)

On completion of the module, students should be able to set up and operate conventional and CNC milling machines to produce components in accordance with given specifications.

3D CAD/CAM Applications

On completion of the module, students should be able to interpret engineering drawings, create 3D CAD models and generate and verify CNC part programs using a CAD/CAM system for CNC lathes and CNC milling machines.

Digital Manufacturing Processes

On completion of the module, students should be able to use CAD/CAM systems to develop 3D digital models, set up and operate multi-axis CNC machines to produce precise components in accordance to given specifications. Student will also be able to review machining processes remotely with digital monitoring systems and interpret machine data to optimise cutting parameters and machine performance.

Machine Monitoring Systems

On completion of the module, students should be able to set up and operate CNC laser cutting machine to produce metal parts and injection moulding machine with pick & place robot to produce plastic parts. Student will also be able to use machine monitoring systems to monitor the overall efficiency of manufacturing processes and interpret production data to improve productivity.

Industry Attachment

Students will undergo a six-month internship with companies to deepen skills and knowledge acquired in ITE, and further develop competencies in areas related to precision engineering.

Electives (Course Specific)

Assembly Skills

On completion of the module, students should be able to select and use the correct hand tools for assembly and dismantle of mechanical components.

Grinding

On completion of the module, students should be able to understand the fundamentals of co-ordinate measuring techniques. They will be able to operate and apply the application to perform mathematical alignment of various simple geometrical components and obtain the measured results as required.

Electives (Inter-Disciplinary)

Design Conceptualization and Rapid Prototyping

On completion of the module, students should be able to create a 3D solid model using CAD software and to operate the rapid prototyping printing machine to generate the 3D model.

Electives (General)

As reflected on pages 279-281.

Life Skills Modules

As reflected on page 281.

NITEC IN ELECTRICAL TECHNOLOGY (LIGHTING & SOUND)

COURSE SYNOPSIS

On completion of the course, students should be able to

- Liaise and coordinate with clients relating to the requirements of lighting, sound and visual media systems
- Read and interpret drawings and diagrams of lighting, sound and visual media systems
- Supervise packing, safe transportation and unpacking of lighting, sound and visual media systems
- Set up, install, test, operate and maintain lighting, sound and visual media systems
- Implement on-site safety programmes and ensure that lighting, sound and visual media systems for events and performances comply with regulations and requirements.

JOB OPPORTUNITIES

Nitec in Electrical Technology (Lighting & Sound) graduates are employed by manufacturers and companies dealing in audio and visual, lighting and sound systems that are required for both outdoor and indoor events in the creative and performing arts industry. In addition, it is expected their skills and knowledge would be highly sought after in the MICE and hospitality sectors. Some of the job titles held by graduates include Electrical, Lighting & Sound Technician, Theatre Technician, Studio Technician, AV Specialist, Stage Technician, Rigging & Trussing Specialist, AV Technician. There are excellent opportunities for career advancement to higher-level positions such as Lighting & Sound Designer and Consultant.

MODULE OBJECTIVES

Core Modules

Residential Installation and Testing

On completion of the module, students should be able to design, install, test and maintain single phase electrical installation and wiring systems in residential premises in compliance with relevant local standards, regulations and codes of practice.

Industrial and Commercial Installation and Testing

On completion of the module, students should be able to design, install, test and maintain three phase electrical installation and wiring systems in industrial and commercial premises in compliance with relevant local standards, regulations and codes of practice.

Digital Communication and Smart Monitoring

On completion of the module, students should be able to maintain data cabling system for digital internet communication as well as smart metering and alarm systems in compliance with relevant local standards, regulations and codes of practice.

Power System and Switchboard

On completion of the module, students should be able to perform proper isolation, lockout tag out procedures as well as maintain low voltage electrical switchboards, power monitoring system and temporary electrical supply system in compliance with relevant local standards, regulations and codes of practice.

Lighting Systems and Control

On completion of the module, students should be able to install, test and operate lighting equipment and systems used in MICE, entertainment and performing arts industry in compliance with relevant local standards, regulations and codes of practice.

Sound Systems and Control

On completion of the module, students should be able to plan, install, test and maintain sound equipment and systems used in MICE, entertainment and performing arts industry in compliance with relevant local standards, regulations and codes of practice.

Visual Media Systems and Control

On completion of the module, students should be able to install, test and operate visual media equipment and systems used in MICE, entertainment and performing arts industry in compliance with relevant local standards, regulations and codes of practice.

Industry Attachment

Students will be attached to relevant companies to complement and reinforce the skills and knowledge acquired at ITE and to gain professional and working experience.

Electives (Course Specific)

PLC Applications and Networking

On completion of the module, students should be able to set up, configure and test a PLC network for an industrial automation system.

Entertainment Lighting Design

On completion of the module, students should be able to apply the knowledge of basic lighting design principles and techniques in producing a small entertainment show using lighting visualization software.

Smart Home

On completion of the elective, students should be able to program a smart home system for controlling lighting in a house.

3D Audio and Acoustics

On completion of this module, students should be able to apply the knowledge, skills of 3D audio for live, and studio applications, which includes the ability to employ the right type of equipment to carry out, setting up 3D sound systems. Student should also be able to apply the knowledge and skills in acoustic fundamentals, which includes understanding room mode and acoustic treatment.

Electives (Inter-disciplinary)

Sensor Technology

On completion of the module, students should be able to install and test sensor for industrial and electrical engineering applications.

SCADA

On completion of the module, students should be able to explain the basic configuration and provide an overview of a SCADA system. They are also trained to explain the techniques and methods used on data acquisition, the control of the field devices, communication, applications and operation of the system.

Structured Cabling

On completion of the module, students should be able to explain the principle of structured cabling and install a standard cabling system according to the relevant standard. They should also be able to perform testing and trouble-shooting and certify the quality of structured cabling installations with copper and fibre-optics cables.

Applied Pneumatic Control

On completion of the module, students should be able to develop control circuits based on knowledge of the construction, principles of operation and application of the various components and equipment in electromechanical, pneumatic and electro-pneumatic control systems.

Electives (Joint ITE-Industry)

PLC Control Builder

On completion of the module, students should be able to use PLC engineering tool to configure projects based on IEC 61131-3 Standard with one or several applications running in PLC.

Electives (General)

As reflected on pages 279-281.

Life Skills Modules

As reflected on page 281.

NITEC IN ELECTRICAL TECHNOLOGY (POWER & CONTROL)

COURSE SYNOPSIS

On completion of the course, students should be able to

- Design, install, repair, maintain, operate, inspect and test electrical or supply installations where the operating voltage and approved load do not exceed 1,000 volts and 45 kVA respectively.
- Install and maintain electrical switchboards.
- Maintain electrical installations in compliance with relevant codes of practice for electrical installations and other related statutory requirements.
- Install and maintain control and automation equipment and systems for industrial control applications
- Install and maintain electrical motor and equipment
- Install and maintain special electrical installations, electric vehicle charging infrastructure equipment, solar photovoltaic installations and fire alarm systems
- Install and maintain communication and data cabling equipment and systems
-

Remarks:

Graduates who have acquired two years of relevant experience in the work performed by a licensed electrical worker would be eligible to apply to Energy Market Authority (EMA) to sit for the test leading to the award of an Electrician Licence issued by EMA.

JOB OPPORTUNITIES

Nitec in Electrical Technology (Power & Control) graduates are employed by government departments, statutory boards, electricity generation, transmission and distribution companies, manufacturing plants, and companies dealing in M & E consultancy services, electrical engineering works and building services. Some of the job titles held by graduates include Electrical Technician, Electrical Installation Technician, Electrical Power Technician, Electrical Equipment Manufacturing Technician and Electrical Draughtsman. There are excellent opportunities for career advancement to supervisory positions and beyond.

MODULE OBJECTIVES

Core Modules

Residential Installation and Testing

On completion of the module, students should be able to design, install, test and maintain single phase electrical installation and wiring systems in residential premises in compliance with relevant local standards, regulations and codes of practice.

Industrial and Commercial Installation and Testing

On completion of the module, students should be able to design, install, test and maintain three phase electrical installation and wiring systems in industrial and commercial premises in compliance with relevant local standards, regulations and codes of practice.

Digital Communication and Smart Monitoring

On completion of the module, students should be able to maintain data cabling system for digital internet communication as well as smart metering and alarm systems in compliance with relevant local standards, regulations and codes of practice.

Power System and Switchboard

On completion of the module, students should be able to perform proper isolation, lockout tag out procedures as well as maintain low voltage electrical switchboards, power monitoring system and temporary electrical supply system in compliance with relevant local standards, regulations and codes of practice.

Sustainable Energy Systems

On completion of the module, students should be able to install, test and/or maintain solar photovoltaic (PV) systems for residential premises, electrical industrial equipment and appliances and electric vehicle (EV) charging equipment and systems in compliance with relevant local standards, regulations and codes of practice.

Smart Living Systems

On completion of the module, students should be able to program, test and maintain smart home control systems in compliance with relevant local standards, regulations and codes of practice.

Electrical Machines and Applications

On completion of the module, students should be able to maintain electrical motor installations including their associated conventional, digital and advanced control systems for various industrial motor applications in compliance with relevant local standards, regulations and codes of practice.

Industry Attachment

Students will be attached to relevant companies to complement and reinforce the skills and knowledge acquired at ITE and to gain professional and working experience.

Electives (Course Specific)

PLC Applications and Networking

On completion of the module, students should be able to set up, configure and test a PLC network system for an industrial automation system.

Entertainment Lighting Design

On completion of the module, students should be able to apply the knowledge of basic lighting design principles and techniques in producing a small entertainment show using lighting visualization software.

Smart Home

On completion of the elective, students should be able to program a smart home system for controlling lighting in a house.

3D Audio and Acoustics

On completion of this module, students should be able to apply the knowledge, skills of 3D audio for live, and studio applications, which includes the ability to employ the right type of equipment to carry out, setting up 3D sound systems. Student should also be able to apply the knowledge and skills in acoustic fundamentals, which includes understanding room mode and acoustic treatment.

Electives (Inter-disciplinary)

Sensor Technology

On completion of the module, students should be able to install and test sensor for industrial and electrical engineering applications.

SCADA

On completion of the module, students should be able to explain the basic configuration and provide an overview of a SCADA system. They are also trained to explain the techniques and methods used on data acquisition, the control of the field devices, communication, applications and operation of the system.

Structured Cabling

On completion of the module, students should be able to explain the principle of structured cabling and install a standard cabling system according to the relevant standard. They should also be able to perform testing and trouble-shooting and certify the quality of structured cabling installations with copper and fibre-optics cables.

Applied Pneumatic Control

On completion of the module, students should be able to develop control circuits based on knowledge of the construction, principles of operation and application of the various components and equipment in electromechanical, pneumatic and electro-pneumatic control systems.

Electives (Joint ITE-Industry)

PLC Control Builder

On completion of the module, students should be able to use PLC engineering tool to configure projects based on IEC 61131-3 Standard with one or several applications running in PLC.

Electives (General)

As reflected on pages 279-281.

Life Skills Modules

As reflected on page 281.

NITEC IN MECHANICAL TECHNOLOGY

COURSE SYNOPSIS

On completion of the course, students should be able to

- Interpret technical drawings and hydraulic/pneumatic circuit diagrams.
- Carry out preventive maintenance and inspection on machinery and equipment.
- Fabricate and re-condition machine parts using basic hand-tools and power hand-tools and drilling machines.
- Install, service, troubleshoot, repair and overhaul basic machine tools, pumps, valves, compressors and conveyor systems.
- Install, service, troubleshoot and repair basic hydraulic and pneumatic systems.
- Install pipework system.
- Rectify electrical faults of machinery.

JOB OPPORTUNITIES

Nitec in Mechanical Technology graduates are employed by companies that manufacture metal and plastic products, and food and beverage items. Some of the job titles held by graduates include Maintenance Technician, Mechanical Engineering Technician and Industrial Machinery Technician. There are excellent opportunities for career advancement to supervisory positions and beyond.

MODULE OBJECTIVES

Core Modules

CAD and 3D Printing

On completion of the module, students should be able to interpret engineering blueprint drawings, draw engineering components, update engineering drawings and convert 3D models to 2D drawings by using CAD system. Students should also be able to print 3D models from 3D printer and perform free hand sketching of engineering drawings.

Industrial Piping and Valve System

On completion of the module, students should be able to carry out minor repair and replacement of fluid supply pipes and fittings and maintain, troubleshoot and repair industrial fluid valves.

Machinery Maintenance

On completion of the module, students should be able to carry out a preventive maintenance course, maintain and service bearings and basic engineering mechanisms, lubrication systems and mechanical transmission systems; lift and move heavy loads safely.

Electro Pneumatics and Hydraulics

On completion of the module, students should be able to install, maintain and troubleshoot electro-pneumatic and electro-hydraulic systems in plant machinery and auxiliary equipment.

IoT and Electrical Applications

On completion of the module, students should be able to program microcontroller using High Level Programming Language, transmit the data collected from the sensors to Cloud Server to be presented as graphical information. Students should also be able to understand the types of electrical accessories, connect up simple electrical circuits and replace faulty electrical components.

Plant Equipment Maintenance

On completion of the module, students should be able to install, maintain, troubleshoot and repair air compressor system, mechanical conveyor system and industrial fluid pumps.

Industry Attachment

On completion of the module, students should be able to acquire and apply a cluster of key technical, social and methodological competencies in the occupation.

Electives (Course Specific)

Metrology

On completion of the module, students should be able to understand the fundamentals of inspection and, verify and measure engineering components according to technical drawing using appropriate tools.

Mechanical Fabrication

On completion of the module, students should be able to fabricate and fit engineering components by bench fitting, sawing drilling, reaming and tapping operations according to the specifications in a working drawing.

Engineering Design

On completion of the module, students should be able to design mechanical components and create assembly drawings according to given specifications.

Turning

On completion of the module, students should be able to interpret engineering blueprint drawings, turn components safely using centre lathe to achieve a linear dimensional accuracy up to class IT11, an angular dimensional accuracy of $\pm 30'$ and surface roughness between 1.6 to 3.2 microns.

Bearing Technology

On completion of the module, students should be able to perform mounting and dismounting of anti-friction bearing with appropriate techniques and tools.

Electives (Inter-disciplinary)

Advanced PLC Applications

On completion of the module, students should be able to apply PLC instructions in the design of an industrial automation project and analogue-to-digital processing using windows-based PLC programming software.

Microcontroller Applications

On completion of the module, students should be able to design and write programs for simple microcontroller projects.

Plain Milling

On completion of the module, students should be able to interpret technical drawings, mill plain components safely, using a vertical milling machine and supporting tools, to achieve a linear dimensional accuracy of IT10, an angular dimensional accuracy of $\pm 30'$ and a surface roughness between 1.6 to 3.2 microns.

Product Prototyping

On completion of the module, students should be able to create simple design of a product using 3D CAD software and produce a 3D model of it using basic prototyping devices.

Electives (General)

As reflected on pages 279-281.

Life Skills Modules

As reflected on page 281.

NITEC IN MECHATRONICS AND ROBOTICS

COURSE SYNOPSIS

On completion of the course, students should be able to

- Install, maintain and service pneumatic and electro-pneumatic controlled systems.
- Construct and assemble mechanical support.
- Prepare and interpret electrical and mechanical drawings.
- Install and test electrical systems.
- Install and test peripheral devices and microcomputer controlled systems.
- Troubleshoot electronics systems.
- Set up industrial automation systems, modify PLC program and troubleshoot a simple automated production system at module level.

JOB OPPORTUNITIES

Nitec in Mechatronics and Robotics graduates are generally employed by companies in the high-technology automated engineering and servicing industries. Some of the job titles held by graduates include Automation Technician, Automated Equipment Maintenance Technician, Mechatronics Technician and Associate Engineer. The increasing demand in widely use of robotics and automation technology in healthcare, construction, manufacturing and logistics industries will certainly enhance the career prospects for the graduates moving forward.

MODULE OBJECTIVES

Core Modules

Pneumatics

On completion of the module, students should be able to install, maintain and troubleshoot pneumatics and electro- pneumatic systems.

Robotics

On completion of this module, students should be able to install, program, troubleshoot and maintain a robotics system.

Electrical & Electronics Practices

On completion of this module, students should be able to install electrical trunking, and carry out system wiring for machine control, check and test industrial electronics components and simple electronics circuits using common test instruments to identify and rectify faults.

CAD and Mechanical Systems

On completion of the module, students should be able to read, interpret and produce geometrical and mechanical drawing using Computer-Aided Drafting (CAD) software; and fabricate metal parts according to specifications in working drawing and work samples and carry out maintenance to service, adjust and align mechanical elements.

Drives and Motor Control

On completion of this module, students should be able to install, maintain, troubleshoot and modify common AC and DC motor and control circuits used in automated and manufacturing systems.

PLC and Automation

On completion of this module, students should be able to carry out installations, operations and troubleshooting of programmable logic controller & sensors systems used in automated system and manufacturing systems.

Industry Attachment

On completion of the module, students should be able to acquire and apply a cluster of key technical, social and methodological competencies in the occupation.

Electives (Course Specific)

Application Mathematics

On completion of the module, students should be able to apply the knowledge of mathematics to solve engineering related problems involving the use of basic arithmetic, algebra, graphs and trigonometry.

Animatronics

On completion of the module, students should be able to define type of animatronic components and controller as well as assemble and testing of animatronic character.

Microcontroller Applications

On completion of the module, students should be able to program and interface microcontroller with external devices.

Production Control System and Applications

On completion of the module, students should be able to plan a simple production process, set up, install and troubleshoot an industrial production control system.

Electives (Inter-disciplinary)

Hydraulics

On completion of the module, students should be able to maintain hydraulic systems in industrial automation.

Single Board Micro-controller Applications

On completion of the module, students should be able to write structured programs to interface with peripheral devices and solve simple problems using single board micro-controller.

Lean Manufacturing

On completion of the module, students should be able to work effectively as a team member to support lean manufacturing and process improvement in the industries and apply PDCA in continuous process improvement to increase productivity.

Electives (Joint ITE-Industry)

Robot Palletizing Operations and Programming

On completion of the module, students should be able to operate the palletizing robot system, including editing and modifying programs for different palletizing operations.

Electives (General)

As reflected on pages 279-281.

Life Skills Modules

As reflected on page 281.

NITEC IN RAPID TRANSIT TECHNOLOGY

COURSE SYNOPSIS

On completion of the course, students should be able to

- Perform basic inspection of railway subsystems and facilities.
- Maintain railway electrical and electronics equipment and systems.
- Maintain railway mechanical and pneumatic equipment and systems.
- Maintain rolling stock systems and equipment.
- Maintain permanent way and tracks.
- Maintain engineering train equipment and systems.

JOB OPPORTUNITIES

Nitec in Rapid Transit Technology graduates can be employed by mass rapid transit operators, Government transport planning agencies as well as companies in the rail equipment industry. Some of the job titles that are held by graduates include Rapid Transit Technical Officer, Trains and Rolling Stock Technician and Permanent Way Field Services Technician. There are excellent opportunities for career advancement to supervisory positions and beyond.

MODULE OBJECTIVES

Core Modules

Rapid Transit Systems and Operations

On completion of the module, students should be able to identify and explain the special features of driverless and driver-operated trains, railway engineering technologies, operation and facilities of rapid transit system in Singapore; interpret engineering blueprint drawings; produce, fabricate, repair and/or replace engineering components, pipes, seals, fittings, bearing and couplings in compliance with industry standards and workplace safety regulations.

Rapid Transit Electrical Power System

On completion of the module, students should be able to maintain electrical circuits and equipment, motors, motor control circuits, electrical wiring installations, earthing systems, lightning and surge protection equipment as well as building fire protection and alarm systems.

Rapid Transit Electronics Control Systems

On completion of the module, students should be able to maintain analogue and digital electronics equipment as well as electromechanical control systems.

Rapid Transit Automation and Control Systems

On completion of the module, students should be able to maintain pneumatic and electro-pneumatic, PLC and train fire protection systems.

Rapid Transit Engineering Trains Maintenance

On completion of the module, students should be able to maintain, troubleshoot, service and repair heavy duty diesel engine lubrication, cooling, air intake, exhaust and diesel fuel injection systems and components.

Rolling Stock Systems and Equipment

On completion of the module, students should be able to maintain train battery, air-conditioning, ventilation, brakes, bogie and cabin equipment and door control systems.

Rapid Transit Permanent Way

On completion of the module, students should be able to maintain permanent way parts and tracks as well as third rail and current collection systems for trains.

Industry Attachment

Students will undergo a 3-month attachment to integrate and apply a cluster of key technical, social and methodological competencies and gain exposure and experience in the rapid transit industry.

Electives (Course Specific)

Basic Fire Safety and Protection Systems

On completion of the module, students should be able to diagnose, service and maintain fire-fighting equipment such as fire-alarm systems, hose-reel installations, sprinkler systems, fire-fighting hydrants, portable fire extinguishers, one- and two-way emergency voice communication systems and fire suppression systems in the industrial, commercial and residential building.

Electives (Inter-disciplinary)

Video Surveillance System

On completion of the module, students should be able to install, test and operate the video surveillance systems and equipment.

Metrology

On completion of the module, students should be able to understand the fundamental of inspection and, verify and measure engineering components according to technical drawing using appropriate tools.

Bearing Maintenance Technology

On completion of the module, students should be able to apply the skills and knowledge to select, replace and diagnose anti-friction bearing faults.

Electives (General)

As reflected on pages 279-281.

Life Skills Modules

As reflected on page 281.

NITEC IN URBAN GREENERY & LANDSCAPE

COURSE SYNOPSIS

On completion of the course, students should be able to

- Coordinate and run daily operations of landscape construction and maintenance;
- Construct and maintain landscaped areas including urban greenery, skyrise greenery, gardens, golf courses, turf/sports turf and parks;
- Implement landscape works according to workplan;
- Perform preventive and corrective measures for common pests and diseases;
- Maintain drainage and irrigation systems;
- Operate and maintain landscape related machinery and equipment; and
- Manage nursery production, maintenance, inventory and procurement.

JOB OPPORTUNITIES

Nitec in Urban Greenery & Landscape graduates are employed in landscape construction and maintenance companies. Some of the job titles held by graduates include Assistant Landscape Supervisors, Senior Landscape Technicians, Senior Floricultural Technicians, Senior Interiorscapes Technician, Horticultural Landscaper and Park Officers. There are excellent opportunities for career advancement to supervisory positions and beyond.

Note: The offer of electives is subject to the training schedule of respective ITE Colleges. Students are advised to check with their Class Advisors on the availability of the elective modules they intend to pursue.

MODULE OBJECTIVES

Core Modules

Introduction to Horticulture

On completion of the module, students should be able to perform plant identification and plant health diagnostics, recognise basic plant anatomy and morphology, and interpret work plan for landscape maintenance works.

Landscape Services

On completion of the module, students should be able to prepare landscape work plan, maintain softscape and hardscape, prepare and apply chemicals and fertilizer, supervise installation of landscape structure and facilities, supervise implementation of landscape work, and maintain landscape equipment and machinery.

Nursery Services

On completion of the module, students should be able to propagate ornamental plants in nurseries, maintain nursery facilities and worksite, coordinate nursery operations, transportation of nursery products and crop harvesting, supervise and coordinate the post-harvest operations and nursery production programme, recognise and control pests, diseases and weed, and record and update stock.

Electrical Services

On completion of the module, students should be able interpret electrical circuit diagrams, install conduits and trunkings, replace light fittings and accessories, rectify faults in electrical circuits, and conduct insulation resistance and continuity tests.

Arboriculture Services

On completion of the module, students should be able to plant, transplant, remove and prune trees and palms, perform visual tree assessment (VTA) and inspection, perform tree protection and tree health maintenance, and maintain arboriculture equipment.

Turf Services

On completion of the module, students should be able to supervise installation and maintenance of subsoil drainage and irrigation systems, maintain golf courses and turf, monitor turf health and repair damaged turf, maintain turf equipment, and perform a range of basic field and lab testing on soil.

Urban Greenery

On completion of the module, students should be able to recognise different types of urban greenery, skyrise greenery and urban farming systems, landscape light fixtures and irrigation components, implement automation in landscape works, install water features, and implement irrigation system for urban landscape.

Industry Attachment

Students will be attached to landscape companies to reinforce the skills and knowledge acquired at ITE as well as gain professional and working experience.

Electives (Course Specific)

Floral Design

On completion of the module, students should be able to identify, select, design and arrange suitable flora and fauna schemes to meet different Client's requirements during different occasions.

Electives (Cross-Level)

Engineering Mathematics

On completion of the module, students should be able to solve engineering problems involving indices, logarithms, algebra, graphs, trigonometry, complex numbers and basic statistics.

Elementary Land Surveying

On completion of the module, students should be able to perform a site survey using basic surveying equipment. Students will be able to set up and use the surveying equipment, conduct a closed survey and verify basic survey plan to incorporate levels and contours according to landscape specification.

Electives (Joint ITE-Industry)

Swimming Pool Maintenance

On completion of the module, students should be able to carry out servicing, maintenance and repair on swimming pool filtration system; and carry out water quality checks.

Electives (General)

As reflected on pages 279-281.

Life Skills Modules

As reflected on page 281.
