

NITEC IN ELECTRICAL TECHNOLOGY (POWER & CONTROL)

MODULE OBJECTIVES

Core Modules

Residential Installation and Testing

On completion of the module, students should be able to design, install, test and maintain single phase electrical installation and wiring systems in residential premises in compliance with relevant local standards, regulations and codes of practice.

Industrial and Commercial Installation and Testing

On completion of the module, students should be able to design, install, test and maintain three phase electrical installation and wiring systems in industrial and commercial premises in compliance with relevant local standards, regulations and codes of practice.

Digital Communication and Smart Monitoring

On completion of the module, students should be able to maintain data cabling system for digital internet communication as well as smart metering and alarm systems in compliance with relevant local standards, regulations and codes of practice.

Power System and Switchboard

On completion of the module, students should be able to perform proper isolation, lockout tag out procedures as well as maintain low voltage electrical switchboards, power monitoring system and temporary electrical supply system in compliance with relevant local standards, regulations and codes of practice.

Sustainable Energy Systems

On completion of the module, students should be able to install, test and/or maintain solar photovoltaic (PV) systems for residential premises, electrical industrial equipment and appliances and electric vehicle (EV) charging equipment and systems in compliance with relevant local standards, regulations and codes of practice.

Smart Living Systems

On completion of the module, students should be able to program, test and maintain smart home control systems in compliance with relevant local standards, regulations and codes of practice.

Electrical Machines and Applications

On completion of the module, students should be able to maintain electrical motor installations including their associated conventional, digital and advanced control systems for various industrial motor applications in compliance with relevant local standards, regulations and codes of practice.

Industry Attachment

Students will be attached to relevant companies to complement and reinforce the skills and knowledge acquired at ITE and to gain professional and working experience.

Electives (Course Specific)

PLC Applications and Networking

On completion of the module, students should be able to set up, configure and test a PLC network system for an industrial automation system.

Entertainment Lighting Design

On completion of the module, students should be able to apply the knowledge of basic lighting design principles and techniques in producing a small entertainment show using lighting visualization software.

Smart Home

On completion of the elective, students should be able to program a smart home system for controlling lighting in a house.

3D Audio and Acoustics

On completion of this module, students should be able to apply the knowledge, skills of 3D audio for live, and studio applications, which includes the ability to employ the right type of equipment to carry out, setting up 3D sound systems. Student should also be able to apply the knowledge and skills in acoustic fundamentals, which includes understanding room mode and acoustic treatment.

Electives (Inter-disciplinary)

Sensor Technology

On completion of the module, students should be able to install and test sensor for industrial and electrical engineering applications.

SCADA

On completion of the module, students should be able to explain the basic configuration and provide an overview of a SCADA system. They are also trained to explain the techniques and methods used on data acquisition, the control of the field devices, communication, applications and operation of the system.

Structured Cabling

On completion of the module, students should be able to explain the principle of structured cabling and install a standard cabling system according to the relevant standard. They should also be able to perform testing and trouble-shooting and certify the quality of structured cabling installations with copper and fibre-optics cables.

Applied Pneumatic Control

On completion of the module, students should be able to develop control circuits based on knowledge of the construction, principles of operation and application of the various components and equipment in electromechanical, pneumatic and electro-pneumatic control systems.

Electives (Joint ITE-Industry)

PLC Control Builder

On completion of the module, students should be able to use PLC engineering tool to configure projects based on IEC 61131-3 Standard with one or several applications running in PLC.
