

Sheikh Fawazi bin Mohamed Shaik

Lecturer-Mentor

Security Technology

School of Electronics and Info-Comm Technology

...Passion is passing of positive ions and vibes into the classroom and the workplace.

Why ITE

I have always enjoyed interacting with people from all walks of life because each brings a different story. As a Lecturer, I can be part of their story and able to contribute to their journey to adulthood. I feel that I am privileged to have the opportunity to impart knowledge and skills to the next generation, preparing them to meet the challenges in this ever changing world.

In ITE, we work together cohesively, towards a common goal, for learners to acquire skills, knowledge and values. ITE has a positive learning environment where everyone shares their experiences and best practices allows for creative and innovative pedagogy to be developed.

My Journey

When I started off as an Adjunct Lecturer, I realised that the students learnt best when you win their hearts over. Once the students feel genuine care and concern from their Lecturers they would in turn reciprocate with respect and commitment for their task. I witnessed my efforts were able to influence students into capable and responsible individuals and I wanted to see more. So I seized the opportunity when I was offered a full time Lecturing position nine years ago.

You got to have passion to do or perform well, to me, Passion is passing of positive ions and vibes into the classroom and the workplace.

To keep up-to-date with the Industry, there are plenty of opportunities within ITE to upgrade ourselves with courses and seminars. School Management acknowledged that our Lecturers have to be specialist, especially when educating our students, that's when I received full sponsorship for my Specialist Diploma in Embedded Systems in 2008.

Final Thought

A simple "Hi Sir" when I bump into my graduates in the streets beams me up everytime. The sense of achievement comes from seeing my students actively and successfully acquiring knowledge and skills to meet challenges from both work and life is filling.
